NETWRIX EVENT LOG MANAGER 4.0 RELEASE NOTES

This document provides a list of currently known issues that customers may experience with NetWrix Event Log Manager 4.0. For each issue the list includes an ID, a brief description and a workaround for the problem.

Table 1: NetWrix Event Log Manager 4.0 Issues

ID	Description	Workaround
9770	If NetWrix Event Log Manager is installed on a pre-Vista Windows platform, and monitored computers are running Windows Vista or above, log backups will not be collected if the **Network Traffic Compression** option is turned off (i.e. if agents are disabled).	Enable the **Network Traffic Compression** option for your Managed Objects.
10029	After a Managed Object is deleted from NetWrix Enterprise Management Console, a scheduled task associated with this Managed Object may not be deleted automatically.	Delete the task manually in the Task Scheduler. The task name is "NetWrix Management Console – Event Log Manager - <managed_object_name>".
10219	If NetWrix Event Log Manager is installed on a pre-Vista Windows platform and monitored computers are running Windows Vista or above, and agents are disabled (i.e. the **Network Traffic Compression** option is turned off), events with critical level will only be collected if the Event Level filter is not applied. This filter can be selected when configuring Audit Archiving Filters (inclusive and exclusive) or when creating a new real-time alert.	Enable the **Network Traffic Compression** option for your Managed Objects.
10305	If you run a data collection task manually (by clicking the **Run** button on your Managed Object page in NetWrix Enterprise Management Console) and there is an invalid email address in the **Events Summary Recipients** list, email delivery will fail to all addresses, not just the invalid one.	When you add a new address to the **Events Summary Recipients** list, it is recommended to click the **Verify** button to check if this address is valid.
