

## NETWRIX ACTIVE DIRECTORY CHANGE REPORTER 7.1 RELEASE NOTES

This document provides a list of currently known issues that customers may experience with NetWrix Active Directory Change Reporter, NetWrix Exchange Change Reporter and NetWrix Group Policy Change Reporter 7.1. For each issue the list includes an ID, a brief description and a workaround for the problem.

*Table 1: NetWrix Active Directory Change Reporter 7.1 Issues*

| ID    | Description  | Workaround  |
|-------|--|---|
| 10896 | For Microsoft Exchange Server 2010, changes made to its configuration using certain cmdlets may be displayed with the Exchange Server name in the “Who changed” column instead of a user name.   | Contact <a href="#">NetWrix Technical Support</a> .                                   |
| 10401 | Changes made through the Exchange Management Console in the Organization Configuration node (Federation Trust, Organization Relationships and Hybrid Configuration tabs) may be displayed in an internal Active Directory format that can be difficult to interpret.   | Contact <a href="#">NetWrix Technical Support</a> .                                   |
| 10897 | The product does not report on changes made on an Exchange Server with the Edge Transport role.  | Contact <a href="#">NetWrix Technical Support</a> .                                   |
| 11090 | If changes to a group membership are made through the Exchange Control Panel, the product will report on addition and deletion of all group members in addition to these changes.  | This is going to be fixed in the future product versions.                             |
| 11433 | If an object is created using the Exchange Management Console, and then renamed through the Active Directory Users and Computers snap-in within a short period of time (less than 10 minutes), the product will show duplicate entries for this change. One will show the Exchange Server name in the “Who changed” column, and the other – the name of the user who made this change. | Ignore the duplicate entry with the Exchange Server name in the “Who changed” column. |

|       |   |   |
|-------|---|---|
| 11527 | <p>In Microsoft Exchange Server 2010 SP2, after a mailbox is restored using the NetWrix Active Directory Object Restore wizard, it will be inaccessible for several hours through Microsoft Outlook or Outlook Web App.</p>   | <p>Wait for several hours before using this mailbox.</p> <p>For details on this issue, refer to the following Microsoft Knowledge Base article: <a href="#">You cannot access a mailbox for several hours after you disconnect and then reconnect the mailbox in an Exchange Server 2010 SP2 environment</a></p>  |
| 10431 | <p>If a previously disconnected mailbox is re-connected to a user, NetWrix Exchange Change Reporter will display the mailbox GUID instead of a canonical user name in the “Object Name” column.</p> <p>If, as a result of this operation, the email address of this user is modified, this change will be reported by NetWrix Active Directory Change Reporter with the Exchange Server name in the “Who Changed” column.</p> | <p>If you need to get a canonical user name in an Exchange Change Reporter report, look for the “User” attribute in the “Details” column of the re-connected mailbox change entry.</p> <p>If you need to get the Who changed value for the email address change entry, open the Exchange Change Reporter report for the same time period and look for the entry reflecting the mailbox re-connection event. The user who re-connected the mailbox is the same user who initiated the email address change event. You can match the email modification entry with the mailbox re-connection entry by comparing the ObjectPath in the Active Directory Change Reporter report with the User attribute in the “Details” column of the Exchange Change Reporter report.</p> |
| 11537 | <p>If a user is created through the Active Directory Users and Computers snap-in, and then a mailbox is created for this user through the Exchange Management Console within a short period of time (less than 10 minutes), the product will show duplicate entries for the mailbox creation event. One change will show the Exchange Server name</p>   | <p>Ignore the duplicate entry with the Exchange Server name in the “Who changed” column.</p>  |

|       |   |   |
|-------|---|---|
|       | in the “Who changed” column, and the other – the name of the user who made this change.   |   |
| 11110 | For Microsoft Exchange Server 2010, changes to text strings that have line breaks will contain the before and after values only for the text fragment before the line break. The fact of the change itself will be reported for the whole text string.  | Check the resulting value through the Active Directory Users and Computers snap-in or other tools.  |
| 10590 | For Microsoft Exchange Server 2010, changes to the inetOrgPerson object type will be reported by NetWrix Exchange Change Reporter with the “user” value in the Object Type column.  | Contact <a href="#">NetWrix Technical Support</a> .   |
| 10831 | Since the Configuration partition is common for all domains in a forest, any change to this partition will be reported by NetWrix Active Directory Change Reporter and NetWrix Exchange Change Reporter for each of the monitored domains.<br><br>The name of the user who made the change will only be displayed for the domain where the change was made. Product reports for other monitored domains will show the “System” value in the “Who changed” column. | Ignore entries with the “System” value in the “Who changed” column for other domains.   |
| 10762 | For Microsoft Exchange Server 2010, the previous values for some modified attributes will not be reported.  | Contact <a href="#">NetWrix Technical Support</a> .   |
| 08581 | If you are running NetWrix Exchange Change Reporter in the Freeware mode, changes made through the Exchange Management Console will be displayed with the Exchange Server name in the “Who changed” column.   | To be able to receive change reports for Microsoft Exchange Server with the correct data in the “Who changed” column, you need to purchase NetWrix Exchange Change Reporter. Contact <a href="#">NetWrix Sales</a> to get a quote for NetWrix Exchange Change Reporter. |

|       |  |   |
|-------|--|---|
| 10956 | If a user made a change and then this user's account was renamed, moved or deleted within a short period of time (less than 10 minutes), NetWrix Active Directory Change Reporter and Netwrix Exchange Change Reporter will display a canonical user name in the Who Changed column. As a result, reports filtered by this user's name may contain incorrect data. | This is going to be fixed in the future product versions. |
