

# Netwrix Directory Manager

Automate what you can to save time, Delegate what you can't to enhance security

Efficient group and user management forms the backbone of infrastructure and data security. Groups must be compliant with the right memberships and permissions to reduce human errors and increase productivity. Similarly, users must be provisioned and deprovisioned swiftly and accurately to prevent malicious actors from misusing identities to intrude and steal data, thus enhancing security. Netwrix Directory Manager is an essential tool for businesses aiming to increase productivity and enhance security by simplifying group and user management within Active Directory & Entra ID (AAD). Microsoft Entra ID (formerly-Azure AD).

## INCREASE PRODUCTIVITY

Netwrix Directory Manager's automation ensures swift and accurate management of group memberships and user lifecycles from provisioning to deprovisioning. This reduces human errors and enhances IT productivity.

## ENHANCE SECURITY

Netwrix Directory Manager delegates control over access to sensitive groups or resources. This empowers resource owners or managers to enhance security by preventing the creation of overly privileged groups and users.

## CUSTOMER FEEDBACK

"It was critical that customized packages be distributed to various groups as they required different levels of detail. With Netwrix Directory Manager, we were able to customize this in 15 minutes. What would have been a many-day project in the past, was so simple"

Office of Attorney General's IT Section

## | KEY FEATURES

### AUTOMATE GROUP MANAGEMENT

Automate group management across directories by creating a query which makes groups sensitive to changes within directory. In addition, reflect your organizational hierarchy with intelligent group nesting.

### ASSIGN TIME-BASED MEMBERSHIPS

Assign temporary group roles and memberships for time-limited projects using domain or OU-specific policies with automatic revocation to enhance security and prevent over-privileged groups.

### AUTOMATE USER PROVISIONING IN APPS VIA SCIM

Automate the user provisioning into SCIM supported applications by using group memberships as a criteria.

### DELEGATE PASSWORD RESET TO USERS

Enhance security by enabling users to reset their passwords, reducing helpdesk tickets and improving IT productivity. Enforce password restrictions on domain password creations.

### CONTROL ACCESS WITH WORKFLOWS

Delegate group and user management to resources owners and appoint them as approvers to review any sensitive requests before being reflected in directory.

### AUTOMATE USER PROVISIONING/ DEPROVISIONING

Improve user provisioning and deprovisioning processes using bulk data sync from an authoritative source (such as HRIS platforms) to a destination.

### LINK GROUPS & USERS ACROSS DIRECTORIES

Reflect the changes in groups and users across identity stores in near real time without any third-party connector.

### ATTEST WITH LIFECYCLE ENFORCEMENT

Delegate group and user management through a scheduled workflow for attesting to the active status of groups and users, thereby preventing them from being expired and deprovisioned from the directory.

### ENABLE SINGLE SIGN-ON

Single Sign On and Multi-Factor Authentication support for standard SSO offerings including Okta, Ping, DUO, OneLogin and others including MFA.

### REVIEW ENTITLEMENTS

Evaluate and adjust entitlements to limit groups and users to the least privileges.

## HOW IS NETWRIX DIRECTORY MANAGER DIFFERENT?

### ONE-STOP MANAGEMENT

Eliminate the need for switching between applications for group and user management.

### MOBILE APP

Enable users to perform common tasks on their mobile devices: validate profiles, manage accounts, approve workflows, and provision users into apps, joining groups, leaving groups, approving workflow requests, and more

### POWER AUTOMATE INTEGRATION

Execute processes seamlessly across platforms by linking a workflow in an identity store to Power Automate flow, triggering the linked flow automatically when workflow activates.

### RESTful APIs

Integrate group and user management processes into your applications using APIs
