

# Netwrix Privileged Access Management

Stop Breaches Before They Start. Secure Privileged Access.

Uncontrolled privileged access and weak credential management expose organizations to security breaches. Netwrix Privilege Access Management delivers comprehensive privileged access and credential security in a single solution. It eliminates standing privileges, enforces just-in-time access, secures passwords with automated credential management, and monitors privileged sessions with real-time visibility.

## SHRINK YOUR ATTACK SURFACE

Eliminate standing privileges and enforce least privilege access across all endpoints, servers, and cloud environments.

## STRENGTHEN CREDENTIAL SECURITY

Secure privileged accounts with role-based access control (RBAC), strong password policies, and automated credential rotation.

## ELIMINATE THE ANXIETY OF AUDITS

Gain complete visibility into privileged access and password usage with real-time session monitoring and automated compliance reporting.

Netwrix Privilege Secure was straightforward to install, allowing my engineers, who were not very familiar with the product, to easily implement it. This helped us avoid large-scale consultancy costs and shorten the setup process to a single day, compared to the several weeks required by other products.

Ivar Indekeu, Senior Manager IT Operations at H. Essers

# End to End Security for Privileged Access

## ELIMINATE PRIVILEGED ACCOUNT SPRAWL

Continuously discover, visualize, and manage all privileged accounts across your environment, identifying unmanaged or excessive privileges before they become security risks.

## IMPLEMENT ZERO-STANDING PRIVILEGES

Replace persistent privileged accounts with temporary, single-use privileged identities that automatically expire, minimizing attack opportunities.

## WHY NETWRIX?

### ZERO STANDING PRIVILEGES

Unlike other PAM solutions, Netwrix eliminates standing privileges with ephemeral, time-limited accounts, leaving attackers nowhere to go.

### NO HIDDEN FEES OR EXPENSIVE ADD-ONS

Everything you need is included — no extra costs for high availability, vault integrations, or core security features.

### FASTER DEPLOYMENT – GET VALUE IN DAYS, NOT MONTHS

Deploy in your existing environment without complex infrastructure changes or lengthy implementation projects.

## SECURE REMOTE ACCESS FOR IT STAFF & VENDORS

Enable VPN-less, Zero Trust remote access with full session monitoring, keystroke logging, and real-time termination controls to secure privileged user connections.

## PROTECT ENDPOINTS BY ENFORCING LEAST PRIVILEGE

Implement least privilege enforcement dynamically elevating specific applications and commands without granting full admin rights.

## MONITOR AND RECORD PRIVILEGED SESSIONS FOR THREAT DETECTION

Capture every privileged action with full session logging, behavior analytics, real-time monitoring, and automated alerts for suspicious activity.

## STREAMLINE COMPLIANCE

Automate compliance reporting with pre-built audit trails, real-time policy enforcement, and role-based access certification to simplify industry regulation adherence.

## SIMPLIFY SECURE ACCESS FOR IT TEAMS

Provide IT teams with self-service, secure access requests for critical resources, enforced with granular, policy-driven security controls.

## STRENGTHEN VENDOR & THIRD-PARTY ACCESS CONTROLS

Grant controlled, time-limited vendor access with enforced multi-factor authentication (MFA), full session recording, and detailed audit logs to ensure accountability.
