Netwrix Auditor Access Reviews

Netwrix Auditor module

Beat permissions sprawl with user access reviews

Slash security risks and alleviate IT team headaches by empowering data owners to easily review access rights to the resources they own.

REDUCE THE RISK OF A DATA BREACH
Accurately enforce least privilege by delegating permissions review to those who know who should have what access — the resource owners.

ACHIEVE AND PROVE COMPLIANCE
Easily prove to auditors that data owners regularly certify user access rights as required by HIPAA, SOX and other regulations.

STREAMLINE REGULAR ACCESS REVIEWS
Stop wasting time manually compiling reports of access rights and begging business users to provide feedback.

CUSTOMER FEEDBACK

One of the practices that we wanted to improve upon was the formal auditing of security group membership and ownership. This was always a tedious and complicated process in which we created scripts to generate exportable reports to distribute to those with approval authority. Now with the new Access Review feature, this process is simple, intuitive and distributed, eliminating a large burden from an already busy IT group.

Powerful Data Security Made Easy
Netwrix.com/auditor
Perform user access reviews in four steps

1. **Data owners assignment**
   Designate an owner for each resource and assign them the task of checking the accuracy of access rights to their content.

2. **Access rights review**
   Data owners review user access rights from an intuitive interface and indicate what needs to be changed. There's even space to record notes about the modifications.

3. **Tracking of review status**
   Check the status of all assigned access reviews in one tab. Send a reminder about pending requests to data owners with just one click.

4. **Reporting on access reviews**
   In one click, export a record of any access review so that auditors can easily understand exactly what actions were taken.
