Reclaim Control Over Sensitive Data Access

Reduce the risk of a data breach by reducing the exposure of your sensitive data. Identify your most critical data, strictly limit who has access to it, and quickly spot and block unwanted activity around it.

MINIMIZE YOUR ATTACK SURFACE
Reduce the likelihood of a data breach by pinpointing and mitigating the risks around your sensitive data and keeping access to it at the required minimum.

RESPOND TO INCIDENTS FASTER
Minimize damage to your business by promptly spotting and blocking abnormal user behavior, policy violations and other activity that threatens data security.

ACHIEVE AND PROVE COMPLIANCE
Prove to auditors the strength of access controls around your regulated data with broad and deep visibility into your IT environment.

CUSTOMER FEEDBACK

As a security professional, there are three things you want to know: where your sensitive data is, what users are doing and what privileges they have. Netwrix provides you with a quick, broad view of everything you need to know. What I also like is that Netwrix enables me to secure data and the IT environment without interrupting business processes for users.

Key Features

SENSITIVE DATA DISCOVERY
Focus your protection efforts on the data that requires protection by discovering sensitive, regulated and mission-critical content. Enable data owners to verify the sensitivity of that data to ensure the accuracy of your access controls.

DATA RISK ASSESSMENT
Pinpoint the most significant risks to your sensitive data, such as personal records open to groups like “Everyone” and users with access they don’t exercise. Look deeper by analyzing how users or attackers might elevate their access to get to sensitive data.

AUTOMATED ACCESS REMEDIATION
Safeguard your data by fixing any excessive access you identify — and avoid business disruptions by simulating your changes first to make sure legitimate access will not be revoked. Establish automated remediation actions to maintain security.

DELEGATION OF ACCESS MANAGEMENT
Identify data owners and make it easy for them to regularly attest to access rights to their content, with the power to revoke or modify access as needed on the spot. Maintain least privilege by empowering them to approve or deny access requests from users, without the need for IT involvement.

DATA THREAT DETECTION
Speed threat detection and response with detailed, meaningful alerts about abnormal activity around sensitive data, access policy violations, privilege escalation attempts and other potentially harmful behavior.

AUTOMATED RESPONSE
Mitigate the damage that an attacker, malicious insider or other threat can do by automating response to anticipated incidents — for example, by immediately disabling an account that shows signs of being compromised.

WHY NETWRIX?

BROAD AND DEEP COVERAGE
Govern access to your sensitive data, whether structured or unstructured, both on premises and in the cloud.

SEAMLESS DATA ACCESS GOVERNANCE
Bridge the gaps among your disparate access governance and data security controls, and facilitate all the key functions of IT security: Identify, Protect, Detect, Respond and Recover.

ACCURATE DATA CLASSIFICATION
Get far more accurate data classification results than other tools and easily classify content specific to your business with flexible classification rules.

ECOSYSTEM INTEGRATIONS
Leverage previous investments by integrating Netwrix solutions with your SIEM, data loss prevention (DLP) and other security tools.
