

User Management

Automate what you can to save time, Delegate what you can't to enhance security

Efficient user management is foundational to infrastructure and data security. Users must be provisioned and deprovisioned swiftly and accurately to enhance security by preventing malicious actors from misusing identities to intrude and steal data. Netwrix GroupID is an essential tool for businesses aiming to increase productivity and enhance security by simplifying user management within Active Directory & Microsoft Entra ID (formerly Azure AD).

INCREASE PRODUCTIVITY

GroupID's automation ensures swift and accurate user lifecycle management from provisioning to deprovisioning. This reduces human errors and enhances IT productivity.

ENHANCE SECURITY

GroupID delegates access control of sensitive resources to owners. This empowers resource owners or managers to enhance security by preventing the creation of overly privileged users.

CUSTOMER FEEDBACK

"Before GroupID, I had to staff several employees just to make changes. That is no longer the case. The product was easy to install, and the systems virtually run themselves."

City of Atlanta's CIO

| KEY FEATURES

AUTOMATE USER PROVISIONING AND DEPROVISIONING

Automate user provisioning and deprovisioning using bulk data sync from an authoritative source (such as HRIS platforms) to a destination.

AUTOMATE USER PROVISIONING IN APPS VIA SCIM

Automate the user provisioning into SCIM supported applications by using group memberships as a criteria.

CONTROL ACCESS WITH WORKFLOWS

Delegate user management to resources owners and appoint them as approvers to review any sensitive requests prior to being reflected in directory.

DELEGATE PASSWORD RESET TO USERS

Enhance security by enabling users to reset their passwords, reducing helpdesk tickets, and improving IT productivity.

KEEP DIRECTORY CURRENT

Create jobs that auto sync and update user information in the directory when it changes in a system outside of the directory.

LINK USERS ACROSS DIRECTORIES

Reflect the changes in users across identity stores in near real time, without any third-party connector.

ATTEST WITH LIFECYCLE ENFORCEMENT

Delegate user management through a scheduled workflow for attesting to the active status of users, thereby preventing them from being disabled and subsequently deprovisioned from the directory.

REVIEW ENTITLEMENTS

Evaluate and modify file server and SharePoint permissions to ensure least privileged users.

CREATE AUDIT TRAIL FOR USER OBJECT ACTIONS

Stay secure with history tracked for every action performed in GroupID on a user object. Filter records to locate specific events and annotate records for visibility.

TRANSFORM DATA WITH SCRIPTING

Use Python scripting, in addition to Visual Basic .NET scripts, to format your data while syncing it from a source to a destination provider.

HOW IS NETWRIX GROUPID DIFFERENT?

ONE-STOP USER MANAGEMENT

Eliminate the need for switching between applications for user management across directories.

MOBILE APP

Enable users to perform common tasks on their mobile devices such as validate profiles, manage accounts, approve workflows, and provision users into apps.

POWER AUTOMATE INTEGRATION

Execute processes seamlessly across platforms by linking a workflow in an identity store to Power Automate flow, triggering the linked flow automatically when workflow activates.

RESTful APIs

Integrate user management processes into your applications using APIs

FIRST-CLASS TECHNICAL SUPPORT

Have your issues promptly resolved by first-class technical support team with a 96% satisfaction rate.
