

# Netwrix Strongpoint for NetSuite

## Stress-Free NetSuite — At Any Stage Of Growth

In NetSuite, more customizations can mean more risk. But with Strongpoint, businesses can manage change with security and speed. Strongpoint's four product tiers offer progressively deeper alignment with your business practices, so you can document, optimize, administer, and audit your NetSuite Account.

Setting up your instance to meet these requirements doesn't have to be stressful, expensive, or time-consuming. In fact, with Netwrix Strongpoint, there are just three easy steps:

### CLEAN UP

Identify and safely eliminate technical debt for a cleaner, easier-to-manage, and easier to audit environment.

### MANAGE

Use automation to speed up your change processes, reduce risk, and get accurate, audit-ready reports.

### CONTROL

Build smart controls around access management, segregation of duties, and transactional or record-based events.

## CUSTOMER FEEDBACK

"Why didn't we do this a year ago? It could have saved us a lot of heartache."

Smartsheet

# Key Features of Netwrix Strongpoint

## GAIN CONFIGURATION INSIGHT

Knowing how your account has been customized can be difficult in a mature instance, especially if multiple groups of people have been involved

## EASILY SPOT DEPENDENCIES

Customizations don't exist in a vacuum — they connect to reports, workflows, scripts, and other automation.

## MANAGE CHANGE EFFECTIVELY

Change management is about understanding what you're doing, understanding the impact, and ensuring policies are in place to maintain security, compliance, and efficiency.

## MITIGATE RISK

Without insight and control, changes can introduce new security risks. Reduce that risk by documenting your environment, performing impact analysis, and applying strong change management policies.

## ENSURE APPROPRIATE ACCESS

Use pre-defined or customized rules to automate the application of access policies. Ensure that only users with authorization can access the parts of the system needed.

## LIGHTEN AUDIT BURDEN

Pass compliance audits fast with pre-defined reports showing approved changes, resolved incidents, and remaining unresolved incidents.

## HOW IS NETWRIX STRONGPOINT DIFFERENT?

### NATIVE

Netwrix Strongpoint for NetSuite is built completely inside your NetSuite environment, making it easier to use and more secure.

### LIGHTWEIGHT FOOTPRINT

Low-impact configuration adds little overhead to busy systems.

### LOW COST OF OWNERSHIP

Staying in NetSuite and integrating out to other ITSM systems streamlines business processes and keeps productivity high. Save time and reduce audit costs.

### FAST TIME TO VALUE

Strongpoint automatically documents configuration and start tracking changes from the day that it's installed. Get up and running quickly!
