

# Netwrix Strongpoint for Salesforce

Your first step towards a smarter, safer Org

In Salesforce, more customizations can mean more risk. But with Strongpoint, businesses can manage change with security and speed. Strongpoint's four product tiers offer progressively deeper alignment with your business practices, so you can document, optimize, administer, and audit your Org. Setting up your instance to meet these requirements doesn't have to be stressful, expensive, or time-consuming. In fact, with Netwrix Strongpoint, there are just three easy steps:

## CLEAN UP

Identify and safely eliminate technical debt for a cleaner, easier-to-manage, and easier to audit Org.

## MANAGE

Use automation to speed up your change processes, reduce risk, and get accurate, audit-ready reports.

## CONTROL

Build smart controls around access management, data changes, and other critical functions.

## CUSTOMER FEEDBACK

"Strongpoint gives me complete visibility and control of my systems, so I know what's going on... I have full confidence that my environment is safe, happy and healthy."

# Key Features of Netwrix Strongpoint

## GAIN CONFIGURATION INSIGHT

Knowing how your Org has been customized can be difficult in a mature instance, or if external consultants have been involved.

## EASILY SPOT DEPENDENCIES

Customizations don't exist in a vacuum — they connect to reports, flows, apex, and other automation.

## MANAGE CHANGE EFFECTIVELY

Change management is about understanding what you're doing, understanding the impact, and ensuring policies are in place to maintain security, compliance, and efficiency.

## MITIGATE RISK

Without insight and control, changes can introduce new security risks. Reduce that risk by documenting your environment and applying strong change management policies.

## ENSURE APPROPRIATE ACCESS

Use pre-defined or customized reports to automate the review of access. Ensure that only users with authorization can access the parts of the system needed.

## LIGHTEN AUDIT BURDEN

Pass security and compliance audits fast with pre-defined reports showing approved changes, resolved incidents, and remaining unresolved incidents.

## HOW IS NETWRIX STRONGPOINT DIFFERENT?

### SCALABILITY

Netwrix Strongpoint for Salesforce scales to meet the needs of the largest Orgs.

### LIGHTWEIGHT FOOTPRINT

Low-impact and schedulable scans add little overhead to busy Orgs.

### LOW COST OF OWNERSHIP

Remove the need for prolonged consulting engagements with automation and pre-built reports and analysis.

### FAST TIME TO VALUE

Deploy in weeks not months and start to gain the benefits of better insight and control.
