# 1. Introduction

This guide is intended for the first-time users of Netwrix Auditor for Azure AD. It can be used for evaluation purposes, therefore, it is recommended to read it sequentially, and follow the instructions in the order they are provided. After reading this guide you will be able to:

- Install and configure Netwrix Auditor
- Create a monitoring plan to start auditing Azure AD
- Launch data collection
- See how Netwrix Auditor enables complete visibility

**NOTE:** This guide only covers the basic configuration and usage options for auditing Azure AD with Netwrix Auditor. For advanced installation scenarios and configuration options, as well as for information on various reporting possibilities and other product features, refer to [Netwrix Online Help Center](#).

## 1.1. Netwrix Auditor Features and Benefits

Netwrix Auditor is a visibility platform for user behavior analysis and risk mitigation that enables control over changes, configurations and access in hybrid IT environments to protect data regardless of its location. The platform provides security analytics to detect anomalies in user behavior and investigate threat patterns before a data breach occurs.

Netwrix Auditor includes applications for Active Directory, Active Directory Federation Services, Azure AD, Exchange, Office 365, Windows file servers, EMC storage devices, NetApp filer appliances, Nutanix Files, network devices, SharePoint, Oracle Database, SQL Server, VMware, Windows Server, and User Activity. Empowered with a RESTful API, the platform delivers visibility and control across all of your on-premises or cloud-based IT systems in a unified way.

Major benefits:

- Detect insider threats—on premises and in the cloud
- Pass compliance audits with less effort and expense
- Increase productivity of IT security and operations teams

To learn how Netwrix Auditor can help you achieve your specific business objectives, refer to [Netwrix Auditor Best Practices Guide](#).

Netwrix Auditor for Azure AD detects and reports on all changes made to Azure AD configuration and permissions, including Azure AD objects, user accounts and passwords, group membership. The products also reports on successful and failed logon attempts.

## 2. Prerequisites and System Requirements

This section lists the requirements for the systems that are going to be audited with Netwrix Auditor, and for the computer where the product is going to be installed.

To learn about Netwrix Auditor licenses, refer to the following Netwrix Knowledge Base article: [Netwrix Auditor Licensing FAQs](#). To learn how to install a license, refer to [Licenses](#).

To learn about ports and protocols required for product operation, refer to [Protocols and Ports Required for Netwrix Auditor](#).

To learn about security roles and permissions required for product operation, refer to [Configure Netwrix Auditor Service Accounts](#).

### 2.1. Supported Data Sources

This section lists platforms and systems that can be monitored with Netwrix Auditor for Azure AD.

Data source	Supported Versions
Azure AD	Azure Active Directory version provided within Microsoft Office 365  <b>NOTE:</b> Microsoft GCC (government community cloud) and GCC High are supported. DoD tenant types are not supported.  <b>NOTE:</b> You may need to take some preparatory steps, depending on the authentication method you want to use for collecting Azure AD and Office 365 data. See <a href="#">For Office 365 and Azure AD Auditing</a> .

### 2.1.1. Considerations for Oracle Database Auditing

Starting with version 9.95, Netwrix Auditor for Oracle Database is focused on versions 12c and above. It means that Oracle Database 11g users will not be able to benefit from latest features and improvements of the product. Oracle Database 11g users should also consider its support expiration dates set by the vendor. So, when planning your Netwrix Auditor deployment, consider the following:

- Several limitations apply to Oracle 11g support in Netwrix Auditor 9.96:
  - Oracle wallets are not supported
  - Lightweight drivers for Oracle Instant Client are not supported
  - Netwrix Auditor client UI does not display any warnings and / or errors regarding to trail audit mode operation
- If you are using Oracle Database 11g and Netwrix Auditor 9.9 (or earlier) and do not plan to upgrade your deployment, you will have all 9.9 capabilities unchanged.
- If you are using Oracle Database 11g and have performed seamless upgrade to Newrix Auditor 9.96, the audit data collection will operate properly. However, consider [General Considerations and Known Issues](#) and keep in mind Oracle Database 11g support expiration dates.

If you are using Oracle Database 12c or later, make sure you have **Unified auditing** mode enabled. Otherwise, Netwrix Auditor may not operate properly. Refer to [Migrate to Unified Audit](#) for more information.

Check out the following documentation sections:

- - [Software Requirements](#)
  - [Configure Oracle Database for Monitoring](#)

## 2.2. Requirements to Install Netwrix Auditor

This section provides the requirements for the computer where Netwrix Auditor is going to be installed. Refer to the following sections for detailed information:

- [Hardware Requirements](#)
- [Software Requirements](#)

### 2.2.1. Hardware Requirements

This section provides estimations of the resources required for Netwrix Auditor deployment.

**IMPORTANT!** Consider that actual hardware requirements will depend on your monitored infrastructure, the number of users in your environment, and activities that occur in the infrastructure per day. It is strongly recommended that you go through the [Deployment Planning](#) section before you start the installation.

Requirements provided in this section apply to a clean installation on a server without any additional roles or third-party applications installed.

Below you can find rough estimations, calculated for evaluation of Netwrix Auditor for Azure AD. Refer to [Netwrix Online Help Center](#) for more information on the Netwrix Auditor hardware requirements.

You can deploy Netwrix Auditor on a virtual machine running Microsoft Windows guest OS on the corresponding virtualization platform, in particular:

- VMware vSphere
- Microsoft Hyper-V
- Nutanix AHV

Note that Netwrix Auditor supports only Windows OS versions listed in the [Software Requirements](#) section.

### 2.2.1.0.1. Scenario 1

Netwrix Auditor and SQL Server instance will be deployed on different servers.

Requirements below apply to Netwrix Auditor server.

Hardware component	Evaluation, PoC or starter environment
--------------------	--

### 2.2.1.0.2. Scenario 2

Netwrix Auditor server and SQL Server instance will be deployed on the same machine.

**IMPORTANT!** In large and extra -large environments, installation of Netwrix Auditor and SQL Server on the same server is not recommended. Instead, deploy an SQL Server instance on a separate server or cluster that meets the requirement in Scenario 1. Refer to related Microsoft guidelines.

Hardware component	Evaluation, PoC or starter environment
Processor	2 cores
RAM	8 GB
Disk space	100 GB—System drive 100 GB—Data drive (Long-Term Archive and SQL Server)

## 2.2.2. Software Requirements

The table below lists the software requirements for the Netwrix Auditor installation:

Component	Requirements
Operating system (English-only)	Windows Server OS: <ul style="list-style-type: none"> <li>• Windows Server 2019</li> </ul>

Component	Requirements
	<ul style="list-style-type: none"> <li>Windows Server 2016</li> <li>Windows Server 2012 R2</li> <li>Windows Server 2012</li> </ul> Windows Desktop OS (64-bit): <ul style="list-style-type: none"> <li>Windows 10</li> <li>Windows 8.1</li> </ul>
.NET Framework	<ul style="list-style-type: none"> <li>.NET Framework <a href="#">4.5</a> and above.</li> </ul>
Installer	<ul style="list-style-type: none"> <li><a href="#">Windows Installer 3.1</a> and above</li> </ul>

### 2.2.2.1. Other Components

To monitor your data sources, you will need to install additional software components on Netwrix Auditor Server, in the monitored environment, or in both locations.

Data source	Components
<ul style="list-style-type: none"> <li>Azure AD</li> </ul>	Usually, there is no need in any additional components for data collection. <p><b>NOTE:</b> If you get an error message saying some components are missing, please contact Netwrix Technical Support.</p>

### 2.2.2.2. Using SSRS-based Reports

SQL Server Reporting Services are needed for this kind of reports (see [SQL Server Reporting Services](#)). If you plan to export or print such reports, check the requirements below.

#### *Export*

To export SSRS-based reports, **Internet Explorer** must be installed on the machine where Netwrix Auditor client runs.

**Internet Options** must be configured to allow file downloads for the **Local intranet** zone:

1. Select **Internet Options** and click **Security**.
2. Select **Local intranet** zone and click **Custom level**.
3. In the **Settings** list, locate **Downloads >File download** and make sure the **Enabled** option is selected.

### *Printing*

To print SSRS-based reports, SSRS Report Viewer and Netwrix Auditor Client require ActiveX Control to be installed and enabled on the local machine. See this [Knowledge Base article](#) for details.

You can, for example, open any SSRS-based report using Internet Explorer and click **Print**. Internet Explorer will prompt for installation of the additional components it needs for printing. Having them installed, you will be able to print the reports from Netwrix Auditor UI as well.

## 3. Review Components Checklist

To speed up the evaluation process, Netrix recommends you to ensure that the following services and components are up and running prior to the Netrix Auditor installation.

Service or component	Recommendations
SQL Server with Reporting Services (or Advanced Services) 2008 or higher.	<p>Supported SQL Server versions are listed <a href="#">here</a>.</p> <p>Consider maximum database size in different versions. Make your choice based on the size of the environment you are going to monitor, the number of users, and other factors. Remember that maximum database size in Express editions may be insufficient.</p> <p><b>NOTE:</b> Although Netrix Auditor provides a convenient way to download SQL Server 2014 Express edition right from the product, it is recommended to deploy SQL Server instance in advance.</p> <p>If installed separately, remember to test SQL Server connectivity.</p>
Test account	<p>Netrix recommends you to create a special account with extensive privileges. This account should have sufficient permissions to:</p> <ul style="list-style-type: none"> <li>• Collect audit data. See <a href="#">Data Collecting Account</a> for more information.</li> <li>• Access data stored in the SQL Server instance: <ul style="list-style-type: none"> <li>• The account must be assigned the <b>Database owner (db_owner)</b> role and the <b>dbcreator</b> server role.</li> <li>• The account must be assigned the <b>Content Manager</b> role on the SSRS Home folder.</li> </ul> </li> <li>• Make test changes in your environment.</li> </ul>

### 3.1. Data Collecting Account

This is a service account that Netrix Auditor uses to collect audit data from the monitored items (domains, OUs, servers, etc.). Netrix recommends creating a dedicated service account for that purpose. Depending on the data source your monitoring plan will process, the account must meet the corresponding requirements (see the table below).

**NOTE:** If you are going to enable integration with Netrix Data Classification (NDC Provider), additional server roles must be assigned to the account. See [For NDC Provider](#) for more information.

For more information about NDC provider, refer to the

Starting with version 9.96, you can use group Managed Service Account (gMSA) as data collecting account. Currently, the following data sources are supported: Active Directory (also for Group Policy and Logon Activity), Windows Server, File Server (currently for Windows File Servers), SQL Server, SharePoint.

For more details about gMSA usage, see [Using Group Managed Service Account \(gMSA\)](#).

The gMSA should also meet the related requirements (see the table below).

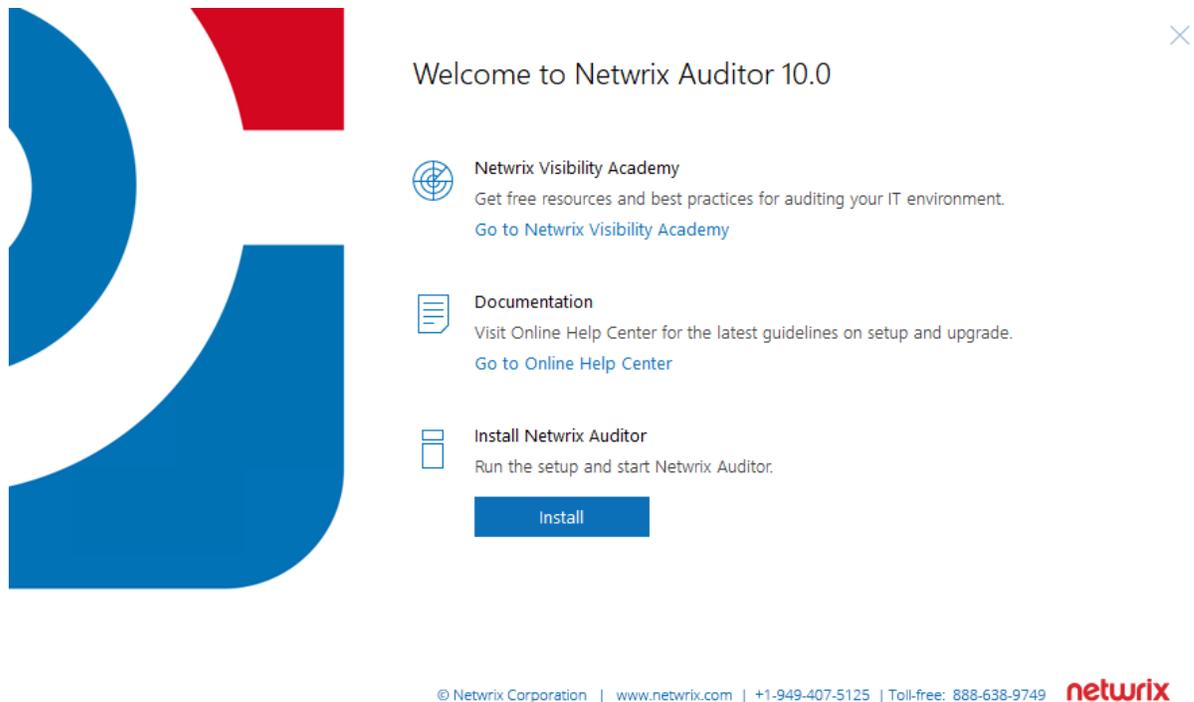

**NOTE:** The information in this section is outside the quick-start guide scope and is provided for reference only. For detailed instructions on how to configure the data collecting account to access your audited platform or application, see [Netwrix Auditor Online Help Center](#).

Data source	Required rights and permissions:
Azure AD, Exchange Online, SharePoint Online	<a href="#">For Office 365 and Azure AD Auditing</a> <a href="#">For Office 365 and Azure AD Auditing</a>
NDC Provider	<a href="#">For NDC Provider</a>

# 4. Install the Product

## To install Netwrix Auditor

1. Download Netwrix Auditor 10 from [Netwrix website](#).
2. Unpack the installation package. The following window will be displayed on successful operation completion:

3. Follow the instructions of the setup wizard. When prompted, accept the license agreement.
4. On the **Select Installation Type** step, select **Full installation**.
5. On the **Destination Folder** step, specify the installation folder.
6. On the **Netwrix Customer Experience Program** step, you are invited to take part in the Netwrix Customer Experience Program. It is optional on your part to help Netwrix improve the quality, reliability, and performance of Netwrix products and services. If you accept, Netwrix collects statistical information on how the Licensee uses the product in accordance with applicable law. Select **Skip** if you do not want to participate in the program.

**NOTE:** You can always opt-out of the Netwrix Customer Experience Program later. See [Netwrix Online Helpcenter](#) for instructions on how to cancel participation in the program.

7. Click **Install**.

After a successful installation, Netwrix Auditor shortcut will be added to the **Start** menu/screen and the product will start. Review the following for more information about the product navigation: [First Launch](#).

# 5. Monitoring Plans

To start auditing your environment and analyzing user behavior with Netwrix Auditor, create a monitoring plan.

A monitoring plan defines data collection, notification, and storage settings.

To start collecting data, and add items to its scope.

So, to collect data from your environment, you need to do the following:

1. Specify a data source and create a monitoring plan with a wizard. See [Create a New Plan](#) for more information.
2. Add items to be monitored. An item is a specific object you want to audit. As soon as the item is added, to the monitoring plan, Netwrix Auditor starts collecting data from it. See [Add Items for Monitoring](#) for more information.

## 5.1. Using historical data

For many data sources, you can instruct Netwrix Auditor to collect state-in-time data along with event data. For that, Netwrix Auditor uses state-in-time snapshots of the relevant system (for example, see [Data Collection from VMware Servers](#)).

To keep users up-to-date on actual system state, Netwrix Auditor updates the latest snapshot on the regular basis. Thus, only the latest snapshot is available for ongoing reporting in Netwrix Auditor.

However, you may need to generate reports based on the historical data. For that, you must import the historical snapshots to the database.

**NOTE:** To import snapshots, you must be assigned the *Global administrator* or the *Global reviewer* role. See [Assign Roles](#) for more information.

### *To import historical snapshots:*

1. Select the monitoring plan you need.
2. Select the required data source and click **Edit data source** on the right to open its properties.
3. Click **General** on the left.
4. In the **Manage historical snapshots** section, click **Manage**.
5. In the **Manage Snapshots** window, select the snapshots that you want to import — use the arrows to move the selected snapshots to the **Snapshots available for reporting** list. When finished, click **OK**.

## 5.2. Create a New Plan

On the main Netwrix Auditor page, click the **New Azure AD Plan** tile in the **Quick Start** section.

Then follow the steps of the Monitoring Plan Wizard:

- Specify an account for collecting data
- Specify default SQL Server instance and configure the Audit Database to store your data
- Configure notification settings
- Specify the recipients who will receive daily activity summaries
- Specify a plan name

### 5.2.1. Settings for Data Collection

At this step of the wizard, specify the account that Netwrix Auditor will use to access the data source, and general settings for data collection.

Option	Description
Specify the account for collecting data	<p>Provide a user name and a password for the account that Netwrix Auditor will use to collect data. By default, the user name is prepopulated with your account name.</p> <p>Make sure the account has sufficient permissions to collect data. For a full list of the rights and permissions, and instructions on how to configure them, refer to <a href="#">Data Collecting Account</a>. Netwrix recommends creating a special service account with extended permissions.</p> <p><b>NOTE:</b> If you want to audit network devices or Azure AD/Office 365 infrastructure, you can use any account here.</p>

### 5.2.2. Default SQL Server Instance

To provide searching, alerting and reporting capabilities, Netwrix Auditor needs an SQL Server where audit data will be stored in the databases. To store data from the data sources included in the monitoring plan, the wizard creates an Audit Database for each plan. At this step, you should specify the default SQL Server instance that will host Netwrix Auditor databases. To read more, refer to [SQL Server and Audit Database](#).

**NOTE:** Alternatively, you can instruct Netwrix Auditor not to store data to the databases but only to the repository (Long-Term Archive) – in this scenario, you will only be able to receive activity summaries. Reporting and alerting capabilities will not be provided.

**NOTE:** Make sure the **Disable security intelligence and make data available only in activity summaries** checkbox is cleared.

Select one of the following options:

- **Install a new instance of Microsoft SQL Server Express automatically** — this option is available at the first run of the wizard. It allows you to deploy SQL Server 2016 SP2 Express with Advanced Services on the local machine. This SQL Server will be used as default host for Netwrix Auditor databases.
- **Use an existing SQL Server instance** — select this option to use an existing SQL Server instance.

**NOTE:** Local SQL Server instance is detected automatically, and input fields are pre-populated with its settings.

Complete the following fields:

Option	Description
SQL Server instance	Specify the name of the SQL Server instance to store audit data.
Authentication	Select the authentication type you want to use to connect to the SQL Server instance: <ul style="list-style-type: none"> <li>• Windows authentication</li> <li>• SQL Server authentication</li> </ul>
User name	Specify the account to be used to connect to the SQL Server instance. <p><b>NOTE:</b> This account must be granted the <b>database owner (db_owner)</b> role and the <b>dbcreator</b> server role. See <a href="#">Configure Audit Database Account</a> for more information.</p>
Password	Enter a password.

**IMPORTANT!** If you want to use Group Managed Service Account (gMSA) to access the SQL Server instance hosting the database, consider that in this case Netwrix Auditor will not be able to generate SSRS-based reports (due to [Microsoft limitations](#)).

### 5.2.3. Database Settings

At this step, you need to specify a database where Netwrix Auditor will store data collected from the data sources included in this monitoring plan.

**NOTE:** It is strongly recommended to target each monitoring plan at a separate database.

Make sure the **Disable security intelligence and make data available only in activity summaries** checkbox is cleared and **Use default SQL Server settings** is checked.

### Audit Database

Specify the database to store your data and configure settings.

Disable security intelligence and make data available only in activity summaries

Database:

Use default SQL Server settings

Specify custom connection parameters

Authentication:

User name:

Password:

Configure the following:

Setting	Description
<p><b>Disable security intelligence ...</b></p>	<p>Only select this option if you do not want your data to be stored in the database. In this case, you will only be able to receive activity summaries. Reporting and alerting capabilities will not be provided.</p> <p>To store data to the database, leave this check box cleared.</p>
<p><b>Database</b></p>	<p>Default database name is <i>Netwrix_Auditor_&lt;monitoring_plan_name&gt;</i>.</p> <p>It is recommended that you enter a meaningful name for the database here. It may include the data source type (e.g. <i>Exchange_Audit_Data</i> or <i>OracleSrv02_Audit_Data</i>), or so.</p> <p>If you decided to use the existing SQL Server instance instead of dedicated, you may want to use <i>Netwrix_Auditor</i> prefix to distinguish Netwrix Auditor databases</p>

Setting	Description
	from others.
Use default SQL Server settings	Select this option if you want Netwrix Auditor to connect to the SQL Server instance using the default settings you specified <a href="#">Default SQL Server Instance</a> .
Specify custom connection parameters	Select this option to use custom credentials when connecting to SQL Server. Specify authentication method and the account that Netwrix Auditor will use.  Make sure this account has sufficient rights to connect to SQL Server and work with the databases. See <a href="#">Configure Audit Database Account</a> for details.

Netwrix Auditor will connect to the default SQL Server instance and create a database with the specified name on it.

**NOTE:** Global settings that apply to all databases with audit data (including retention period and SSRS server used for reporting) are available on the **Audit Database** page of Netwrix Auditor settings. See [Audit Database](#) for details.

## 5.2.4. SMTP Server Settings

When you create the first monitoring plan, you are prompted to specify the email settings that will be used for activity and health summaries, reports and alerts delivery. For the monitoring plans that follow, Netwrix Auditor will automatically detect SMTP settings; however, for your first plan you should provide them manually. See [this section](#) for details.

## 5.2.5. Email Notification Recipients

Specify who will receive daily emails: [Activity Summary Email](#) on changes in the monitored infrastructure, and [Health Summary Email](#) on Netwrix Auditor operations and health.

Click **Add Recipient** and enter your email.

**NOTE:** It is recommended to click **Send Test Email**. The system will send a test message to the specified email address and inform you if any problems are detected.

## 5.2.6. Monitoring Plan Summary

At this step of the wizard, to provide a meaningful name and optional description for your monitoring plan.

To start collecting data, you should specify the objects (items) that belong to the target data source and should be processed according to the settings of this monitoring plan. For example, for Exchange data source the item will be your Exchange server, for Windows Server data source - computer, IP range or AD container, and so on. To add items right after finishing the monitoring plan wizard, select the **Add item now** checkbox. See [Add Items for Monitoring](#) for details.

## 5.3. Add Items for Monitoring

Once you completed monitoring plan wizard and specified data sources, add items for monitoring.

Each data source has a dedicated item type. Netwrix Auditor automatically suggests item types associated with your data source.

### 5.3.1. Office 365 Tenant

Types of data that can be collected by Netwrix Auditor from the Office 365 organization depend on the authentication option you choose, as explained in the table below.

**IMPORTANT!** This item-level option may influence data collection. In particular, if you decide to switch from basic to modern authentication, consider that state-in-time data for Exchange Online will be no longer collected— even if the related global setting **Collect data for state-in-time reports** is still enabled for the monitoring plan.

Option	Azure AD audit	Exchange Online audit	SharePoint Online audit
Modern authentication	Activity data	Activity data	Activity data State-in-time data
Basic authentication	Activity data	Activity data State-in-time data	Activity data State-in-time data

*To configure Office 365 tenant as a monitored item:*

- On the **General** page of the item properties, specify **Tenant name**:
  - If you are going to use **Basic authentication**, you can proceed to the next step – **Tenant name** will be filled in automatically after it.
  - If you are going to use **Modern authentication**, paste the name you obtained at [Step 4: Obtain Tenant name](#) when preparing your Azure AD app.
- Select authentication method that will be used when accessing Office 365 services:

- With **Basic authentication** selected, Office 365 organization will be accessed on behalf of the user you specify.
  - a. Enter **User name** and **password**; use any of the following formats: *user@domain.com* or *user@domain.onmicrosoft.com*.
  - b. The **Tenant name** field then will be filled in automatically.

**NOTE:** Make sure this user account has sufficient access rights. See [Accessing Azure AD using basic authentication](#)

- With **Modern authentication** selected, Office 365 organization will be accessed using the Azure AD app you prepared (see [Configuring Azure AD app](#)). Enter:
  - **Application ID** you prepared at [Step 1. Create and register a new app in Azure AD](#)
  - **Application secret** you prepared at [Step 3: Configure client secret](#)

3. Click the **Add** button.

Netwrix Auditor - STATIONWIN16

← Add Item (Office 365 tenant)

Home > Monitoring Plans > Monitoring plan Azure AD > Add Item (Office 365 tenant)

General

Specify Office 365 organization settings

Tenant name:  
corp.onmicrosoft.com

Select authentication type for accessing Office 365 services

These settings may influence data collection. [More info](#)

Basic authentication: access on behalf of a user

User name:  
itadmin@corp.onmicrosoft.com  
Example: admin@mydomain.onmicrosoft.com

Password:  
••••••••

Modern authentication: access using Azure AD app. [Click for help](#)

Application ID:  
\_\_\_\_\_

Application secret:  
\_\_\_\_\_

Add Discard

netwrix

**TIP:** You can use a single account to collect audit data for different Office 365 services (Azure AD, Exchange Online, SharePoint Online); however, Netwrix recommends that you specify individual credentials for each of them.

**NOTE:** If you plan to collect and report on the audit data for Exchange Online non-owner mailbox access, consider that the value shown in the “Who” field in reports and search results will be displayed in UPN format (unlike the earlier Netwrix Auditor versions). This refers to the following scenarios:

- a. All new installations
- b. Upgrade from the previous versions if:

- Modern authentication is selected in the item settings after the upgrade
- OR-
- Modern authentication has ever been selected in the item settings and reverted back to Basic later

Now your Office 365 monitoring plan is almost ready. You only need to add the **SharePoint Online** data source with the same Office 365 tenant item. Do the following:

1. On your **Office 365 monitoring plan** page, navigate to **Data source** → **Add data source** in the right pane and select the **SharePoint Online** tile.
2. For evaluation purposes, leave the data source settings unchanged. Click **Add** to add the data source.
3. Now you are again on the main page of your monitoring plan. Click **Add item** under **SharePoint Online**.
4. You will be prompted to select the **Office 365 tenant** item. Specify the same Microsoft account credentials as you provided for Exchange Online.

## 5.4. Launch Data Collection Manually and Update Status

If you do not want to wait until a scheduled data collection, you can launch it manually.

**NOTE:** Not applicable to Netwrix Auditor for User Activity. For this data source, the product sends real-time data about sessions and activity.

Along with data collection, the following actions will be performed:

- An Activity Summary email will be generated and sent to the specified recipients. It will list all changes that occurred since the last scheduled or on-demand Activity Summary delivery.
- Changes that occurred between data collections will be written to the Long-Term Archive and the Audit Database, and become available in the Netwrix Auditor client.
- A state-in-time data will be updated.

### *To launch data collection manually*

1. Navigate to **All monitoring plans** → your monitoring plan, select **Edit**.
2. In the right pane, click **Update**.

**NOTE:** Depending on the size of the monitored environment and the number of changes, data collection may take a while.

## 6. Make Test Changes

Now that the product has collected a snapshot of the data source's current configuration state, you can make test changes to see how they will be reported by Netwrix Auditor.

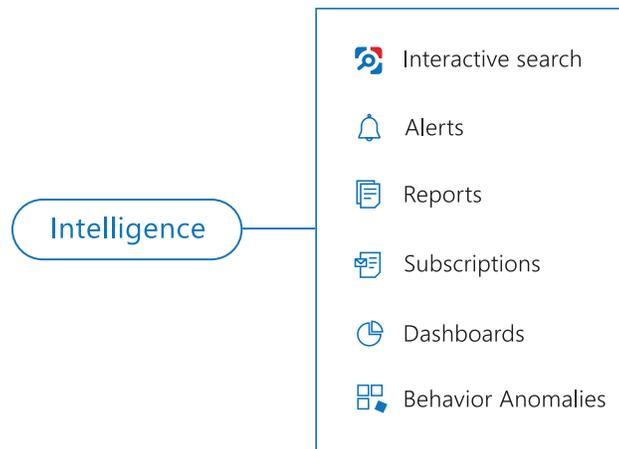

**NOTE:** Before making any test changes to your environment, ensure that you have the sufficient rights, and that the changes conform to your security policy.

For example, make the following test changes:

- Create a new user using **Azure AD**
- Assign the Azure Active Directory Premium license plan to this user account

# 7. See How Netwrix Auditor Enables Complete Visibility

After you have made test changes to your environment, you can see how Netwrix Auditor brings security intelligence into your IT infrastructure and enables complete visibility. Take a closer look at the **Intelligence** section. It contains everything you need to enable complete visibility in your environment.

This chapter explains how to review your test changes with some of the Intelligence options and Activity Summary. Review the following for additional information:

- [Review an Activity Summary](#)
- [Review Overview Dashboard](#)
- [Review the All Changes Report](#)
- [Browse Data with Intelligence Search](#)

In order not to wait for a scheduled Activity Summary generation, force data collection and email delivery.

### *To launch data collection manually*

1. Navigate to **Monitoring Plans** and select your plan in the list.
2. Click **Edit**.
3. In the your monitoring plan settings, click **Update** in the right pane.
4. Check your mailbox for an email notification and make sure that the data collection has completed successfully.

## 7.1. Review an Activity Summary

Activity Summary email is generated automatically by Netwrix Auditor and lists all changes that occurred since the last Activity Summary delivery. By default, an Activity Summary is generated daily at 3:00 AM and delivered to the specified recipients. You can also launch data collection and Activity Summary generation manually.

After the data collection has completed, check your mailbox for an Activity Summary and see how your test changes are reported:

The screenshot shows an email from 'administrator' with the subject 'Netwrix Auditor: Azure AD Activity Summary - Azure AD'. The email content includes a summary of activities and a table of changes.

Action	Object Type	What	Item	Where	Who	When	Details
Added	User	aweston	analyst@corp.onmicrosoft.com	corp.onmicrosoft.com	analyst@corp.onmicrosoft.com	4/10/2017 5:56:54 AM	Account Enabled: "True" Display Name: "aweston" First Name: "alan" Mail Nickname: "aweston" Origin: "Azure AD" Password Policies: "None" Surname: "weston" User Principal Name: "aweston@corp.onmicrosoft.com" User Type: "Member"
Modified	User	aweston	analyst@corp.onmicrosoft.com	corp.onmicrosoft.com	analyst@corp.onmicrosoft.com	4/10/2017 6:00:54 AM	Assigned Plans changed to "Azure Multi-Factor Authentication , Azure Active Directory Premium" Origin: "Azure AD"

The example Activity Summary provides the following information:

Column	Description
Action	Shows the type of action that was performed on the object.
Object Type	Shows the type of the object.
What	Shows the name of the changed object or its path.
Item	Shows the item associated with the selected monitoring plan.
Where	Shows the name of the Microsoft cloud server where the change occurred.
Who	Shows the name of the account under which the change was made.
When	Shows the exact time when the change occurred.
Details	Shows the before and after values of the modified object, object attributes, etc.

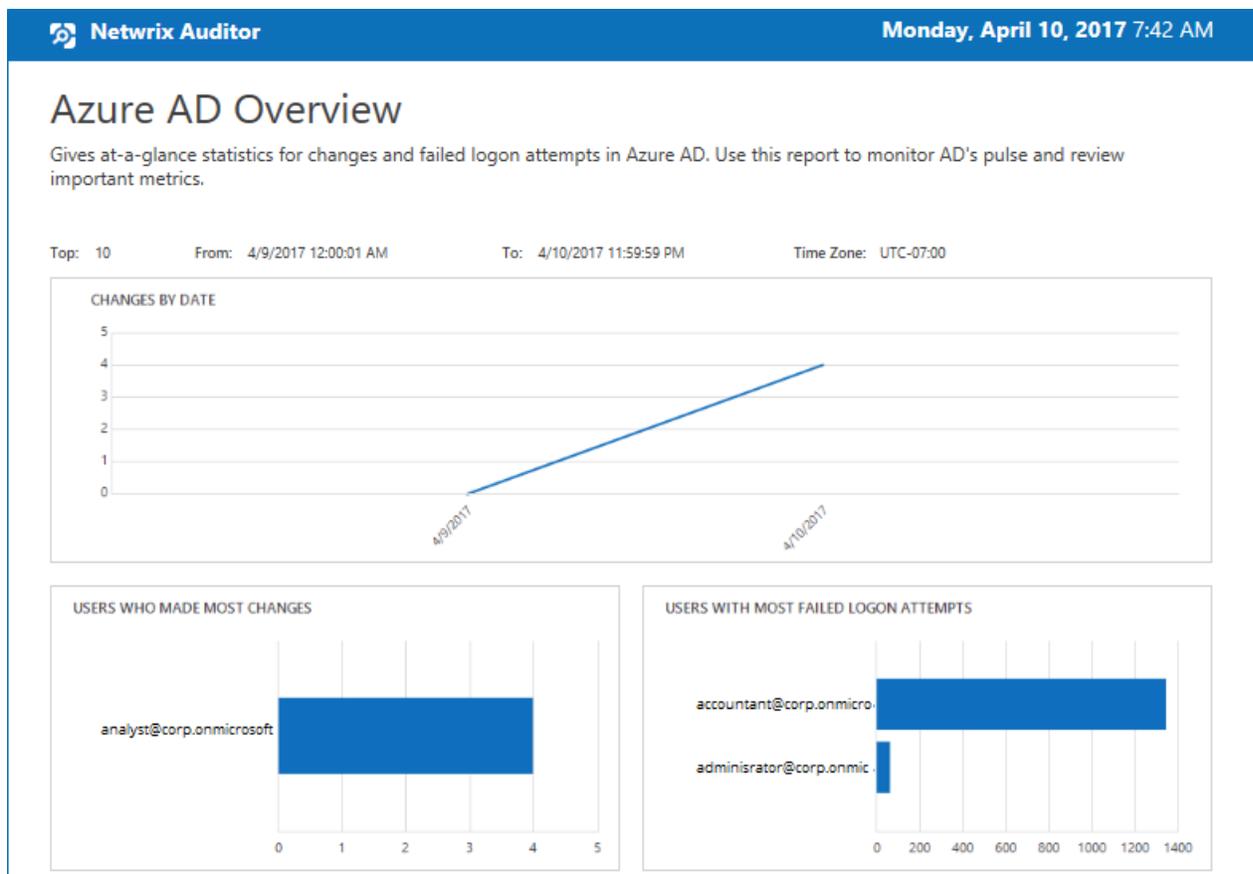

## 7.2. Review Overview Dashboard

**Overview** diagram provides a high-level overview of activity trends by date, user, server, object type or data source in your IT infrastructure. The **Overview** diagram aggregates data on all monitoring plans and all data sources, while system-specific diagrams provide quick access to important statistics within one data source.

After collecting initial data, making test changes to your environment and running data collection again, you can get at-a-glance statistics for changes with the **Azure AD Overview**.

### *To see how your changes are reported with Azure AD Overview*

1. On the main Netrix Auditor page, navigate to the **Intelligence** section and click the **Reports** tile.
2. Expand the **Predefined** → **Azure AD** reports.
3. Select the **Azure AD Overview** report and click **View**.
4. Review your changes.
5. Click on any chart to jump to a table report with the corresponding grouping and filtering of data.

## 7.3. Review the All Changes Report

The Netwrix Auditor client provides a variety of predefined reports that aggregate data from the entire audited IT infrastructure or individual data sources.

Change and activity reports can be found under the **Reports** → **Predefined** → **your data source type** and provide a narrower insight into what is going on in the audited infrastructure and help you stay compliant with various standards and regulations (FISMA, HIPAA, PCI, SOX, etc.).

After collecting initial data, making test changes to your environment and running data collection again, you can take advantage of the reports functionality.

### *To see how your changes are listed in the report*

1. On the main Netwrix Auditor page, navigate to **Reports** → **Predefined** → **your data source**.
2. Select the **All Azure AD Activity by User** report.
3. Click **View** to open the report.

Netwrix Auditor
Monday, April 10, 2017 7:50 AM

## All Azure AD Activity by User

Shows all changes made to Azure AD objects (creation, modification, and deletion), as well as successful and failed logon attempts, grouped by user. This report can be used in compliance audits to show that logon activity and changes are traceable and auditable.

Filter	Value

Origin: Azure AD			
Assigned Plans changed to "Azure Multi-Factor Authentication , Azure Active Directory Premium"			
Origin: Azure AD			

## 7.4. Browse Data with Intelligence Search

Netwrix Auditor delivers complete visibility into your IT infrastructure. Its convenient interactive search interface enables you to investigate incidents and browse data collected across the entire IT infrastructure. When running a search, you are not limited to a certain data source, change type, or object name. You can create flexible searches that provide you with precise results on *who* changed *what*, and *when* and *where* each change was made.

After collecting initial data, making test changes to your environment and running data collection again, you can review changes in details with Intelligence search.

### To browse your audit data and see you test changes

1. On the main Netrix Auditor page, navigate to **Intelligence** → **Search**.
2. Add search filters to your search by clicking on a corresponding icon and providing a value. By default, all entries that contain this filter value are shown. For an exact match, use quotation marks.

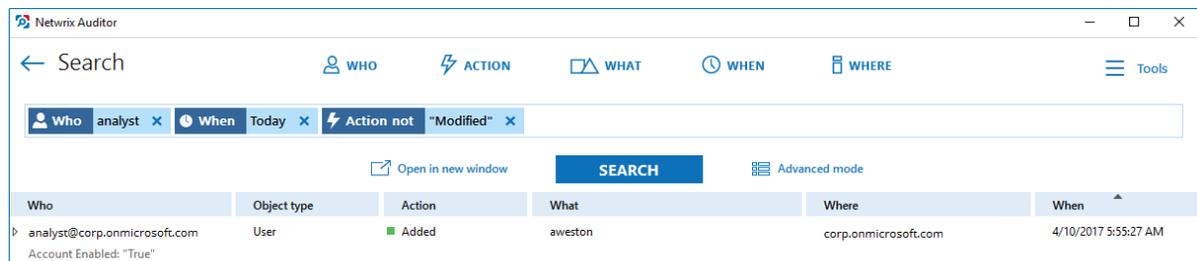

Filters are used to narrow your search results. To create a unique set of filters, you can:

- Add different filters to your search. Search results will be sorted by all selected filters since they work as a logical conjunction (e.g., **Who: Administrator** AND **Action: Added**).
- Specify several values in the same filter to search for any of them (e.g., **Action: Modified** OR **Action: Removed**). To do this, select a filter again and specify a new value.

**NOTE:** Refer to [Netrix Online Helpcenter](#) for detailed instructions on how to apply filters and change match types

3. Click **Search**.
4. Now, you can narrow your search and modify it right from the search results pane. Click any entry that contains excess data, select **Exclude from search** in the **Details** section and specify a filter, e.g., **Action: Modified** to leave information on newly created users only.

Your **Search** field will be updated, the **Action not equal to** filter will be added. Make sure to click **Search** again to update your search results.

5. Having reviewed your search results, navigate to **Tools**.
  - Click **Save as report** to save the selected set of filters. This search will be added to the **Custom** section inside **Reports**, so that you will be able to access it instantly. Refer to [Custom Search-Based Reports](#) for detailed instructions on how to create saved searches.
  - Click **Create alert** to get instant email or SMS notifications on suspicious activity that matches your current search criteria. You only need to specify a name for a new alert, add recipient and assign a risk score. The selected set of search criteria will be associated with the new alert automatically. Refer to [Alerts](#) for detailed instructions on how to create and configure alerts.

Try making more similar test changes to provoke an alert. For example:

Tue 4/11/2017 12:29 PM

---

Netwrix Auditor Alert

### New Azure AD Users

**Who:** [analyst@corp.onmicrosoft.com](mailto:analyst@corp.onmicrosoft.com)

**Action:** Added

**Object type:** User

**What:** ahall

**When:** 4/11/2017 1:37:24 AM

**Where:** corp.onmicrosoft.com

**Data source:** Azure AD

**Monitoring plan:** Azure AD

**Item:** [analyst@corp.onmicrosoft.com](mailto:analyst@corp.onmicrosoft.com) (Office 365 tenant)

**RID:** 20170411092851654573F7819E84649F2BFAD3C7F373F70FC

**Details:**

- Account Enabled: "True"
- Display Name: "ahall"
- First Name: "Andrew"
- Mail Nickname: "ahall"
- Password Policies: "None"
- Surname: "Hall"
- User Principal Name: "[ahall@corp.onmicrosoft.com](mailto:ahall@corp.onmicrosoft.com)"
- User Type: "Member"
- Origin: Azure AD

Once you have received the alert, click the **Behavior Anomalies** tile on the main Netwrix Auditor page to see how the product identifies potentially harmful users and displays their risk scores. Drill-down to user profile to review anomalies and mitigate risks. Refer to [Netwrix Online Helpcenter](#) for more information on behavior anomalies and risk scores.
