# 1. Introduction

This guide is intended for the first-time users of Netwrix Auditor for User Activity. It can be used for evaluation purposes, therefore, it is recommended to read it sequentially, and follow the instructions in the order they are provided. After reading this guide you will be able to:

- Install and configure Netwrix Auditor
- Create a monitoring plan to start auditing User Activity
- Launch data collection
- See how Netwrix Auditor enables complete visibility

**NOTE:** This guide only covers the basic configuration and usage options for auditing User Activity with Netwrix Auditor. For advanced installation scenarios and configuration options, as well as for information on various reporting possibilities and other product features, refer to [Netwrix Online Help Center](#).

## 1.1. Netwrix Auditor Overview

Netwrix Auditor is a visibility platform for user behavior analysis and risk mitigation that enables control over changes, configurations and access in hybrid IT environments to protect data regardless of its location. The platform provides security analytics to detect anomalies in user behavior and investigate threat patterns before a data breach occurs.

Netwrix Auditor includes applications for Active Directory, Azure AD, Exchange, Office 365, Windows file servers, EMC storage devices, NetApp filer appliances, network devices, SharePoint, Oracle Database, SQL Server, VMware, Windows Server, and User Activity. Empowered with a RESTful API, the platform delivers visibility and control across all of your on-premises or cloud-based IT systems in a unified way.

Major benefits:

- Detect insider threats—on premises and in the cloud
- Pass compliance audits with less effort and expense
- Increase productivity of IT security and operations teams

To learn how Netwrix Auditor can help you achieve your specific business objectives, refer to [Netwrix Auditor Best Practices Guide](#).

Netwrix Auditor for User Activity collects and reports on user actions performed within a session and can be configured to capture a video of users' activity on the audited computers.

## 2. Prerequisites and System Requirements

This section lists the requirements for the systems that are going to be audited with Netwrix Auditor, and for the computer where the product is going to be installed.

To learn about Netwrix Auditor licenses, refer to the following Netwrix Knowledge Base article: [Netwrix Auditor Licensing FAQs](#). To learn how to install a license, refer to [Licenses](#).

To learn about ports and protocols required for product operation, refer to [Protocols and Ports Required for Netwrix Auditor](#).

To learn about security roles and permissions required for product operation, refer to [Configure Netwrix Auditor Service Accounts](#).

### 2.1. Supported Data Sources

The table below lists systems that can be monitored with Netwrix Auditor for User Activity:

Data source	Supported Versions
User Activity	<ul style="list-style-type: none"> <li>• Windows Server OS:               <ul style="list-style-type: none"> <li>• Windows Server 2019</li> <li>• Windows Server 2016</li> <li>• Windows Server 2012/2012 R2</li> <li>• Windows Server 2008 R2</li> <li>• Windows Server 2008 SP2 (32 and 64-bit)</li> </ul> </li> <li>• Windows Desktop OS (32 and 64-bit):               <ul style="list-style-type: none"> <li>• Windows 10</li> <li>• Windows 8.1</li> <li>• Windows 7</li> </ul> </li> </ul>

### 2.2. Requirements to Install Netwrix Auditor

This section provides the requirements for the computer where Netwrix Auditor is going to be installed. Refer to the following sections for detailed information:

- [Hardware Requirements](#)
- [Software Requirements](#)

## 2.2.1. Hardware Requirements

Review the hardware requirements for Netwrix Auditor installation.

The metrics provided in this section are valid for clean installation on a server without any additional roles or third part applications installed on it. The use of virtual machine is recommended.

The hardware configuration depends on the size of your monitored environment and the number of activity records processed by the product per day. Below you can find rough estimations, calculated for evaluation of Netwrix Auditor for User Activity. Refer to [Netwrix Online Help Center](#) for complete information on the Netwrix Auditor hardware requirements.

You can deploy Netwrix Auditor on a virtual machine running Microsoft Windows guest OS on the corresponding virtualization platform, in particular:

- VMware vSphere
- Microsoft Hyper-V
- Nutanix AHV

Note that Netwrix Auditor supports only Windows OS versions listed in the [Software Requirements](#) section.

Hardware component	Starter, evaluation, or small environment
Processor	2 cores
RAM	4 GB
Disk space	100 GB—System drive 100 GB—Data drive (Long-Term Archive and SQL Server)
Screen resolution	Minimum 1280 x 1024 Recommended 1920 x 1080 or higher

## 2.2.2. Software Requirements

The table below lists the software requirements for the Netwrix Auditor installation:

Component	Requirements
Operating system	<p>Windows Server OS:</p> <ul style="list-style-type: none"> <li>Windows Server 2019</li> <li>Windows Server 2016</li> <li>Windows Server 2012 R2</li> <li>Windows Server 2012</li> <li>Windows Server 2008 R2 SP1</li> </ul> <p>Windows Desktop OS (64-bit):</p> <ul style="list-style-type: none"> <li>Windows 10</li> <li>Windows 8.1</li> <li>Windows 7 SP1</li> </ul>
.NET Framework	<ul style="list-style-type: none"> <li>.NET Framework <a href="#">3.5 SP1</a>.</li> </ul> <p><b>NOTE:</b> To audit VMware vSphere 6.7 or 6.5, .NET Framework 4.5 or 4.6 is required.</p>
Installer	<ul style="list-style-type: none"> <li><a href="#">Windows Installer 3.1</a> and above</li> </ul>

### 2.2.2.1. Additional Components

In order to monitor some data sources, you may be required to install additional software components.

Data source	Components
<ul style="list-style-type: none"> <li>User Activity</li> </ul>	<p><b><i>In the monitored environment:</i></b></p> <ul style="list-style-type: none"> <li>.NET Framework <a href="#">3.5 SP1</a>, <a href="#">4.0</a>, <a href="#">4.5</a>, or <a href="#">4.6</a> depending on the target server</li> </ul>

## 3. Review Components Checklist

To speed up the evaluation process, Netwrix recommends you to ensure that the following services and components are up and running prior to the Netwrix Auditor installation.

Service or component	Recommendations
SQL Server with Reporting Services (or Advanced Services) 2008 or higher.	<p>Supported SQL Server versions are listed <a href="#">here</a>.</p> <p>Consider maximum database size in different versions. Make your choice based on the size of the environment you are going to monitor, the number of users, and other factors. Remember that maximum database size in Express editions may be insufficient.</p> <p><b>NOTE:</b> Although Netwrix Auditor provides a convenient way to download SQL Server 2014 Express edition right from the product, it is recommended to deploy SQL Server instance in advance.</p> <p>If installed separately, remember to test SQL Server connectivity.</p>
Test account	<p>Netwrix recommends you to create a special account with extensive privileges. This account should have sufficient permissions to:</p> <ul style="list-style-type: none"> <li>• Collect audit data. See <a href="#">Configure Data Collecting Account</a> for more information.</li> <li>• Access data stored in the SQL Server instance: <ul style="list-style-type: none"> <li>• The account must be assigned the <b>Database owner (db_owner)</b> role and the <b>dbcreator</b> server role.</li> <li>• The account must be assigned the <b>Content Manager</b> role on the SSRS Home folder.</li> </ul> </li> <li>• Make test changes in your environment.</li> </ul>

### 3.1. Configure Data Collecting Account

This service account is specified on the monitoring plan creation and is used to collect audit data from the data source items. To ensure successful data collection, Netwrix recommends creating a special service account in advance. The account must comply with the following requirements depending on the data source.

**NOTE:** The information in this section is outside the quick-start guide scope and is provided for reference only. See [Netwrix Online Help Center](#) for detailed instructions on how to configure your Data Processing Account.

Data source	Rights and permissions
User Activity	<i>On the target server:</i> <ul style="list-style-type: none"><li data-bbox="472 474 1040 508">• A member of the local <b>Administrators</b> group</li></ul>

## 4. Install the Product

### To install Netwrix Auditor

1. Download Netwrix Auditor 9.8 from [Netwrix website](#).
2. Unpack the installation package. The following window will be displayed on successful operation completion:

3. Follow the instructions of the setup wizard. When prompted, accept the license agreement.
4. On the **Select Installation Type** step, select **Full installation**.
5. On the **Destination Folder** step, specify the installation folder.
6. On the **Netwrix Customer Experience Program** step, you are invited to take part in the Netwrix Customer Experience Program. It is optional on your part to help Netwrix improve the quality, reliability, and performance of Netwrix products and services. If you accept, Netwrix collects statistical information on how the Licensee uses the product in accordance with applicable law. Select **Skip** if you do not want to participate in the program.

**NOTE:** You can always opt-out of the Netwrix Customer Experience Program later. See [Netwrix Online Helpcenter](#) for instructions on how to cancel participation in the program.

7. Click **Install**.

After a successful installation, Netwrix Auditor shortcut will be added to the **Start** menu/screen and the product will start.

# 5. Monitoring Plans

To start auditing your environment and analyzing user behavior with Netwrix Auditor, create a monitoring plan. All your monitoring plans are listed in the **Monitoring Plans** section.

A monitoring plan defines your data sources and general data collection, notification, and storage settings. To start collecting data, choose a data source, such as User Activity, and add items to its scope. Item is a specific object you want to audit. All data sources and items in your plan share common settings so that you can supervise and manage several data collections as one.

On a high level, you should perform the following steps to start monitoring your environment:

1. Specify a data source and create a monitoring plan with a wizard. See [Create a New Plan](#) for more information.
2. Add items for monitoring. Netwrix Auditor does not collect data until you specify an item. See [Add Items for Monitoring](#) for more information.

## 5.1. Create a New Plan

On the main Netwrix Auditor page, click the tile in the **Quick Start** section.

The wizard that appears will help you set up a new plan in a few easy steps:

- Specify an account for collecting data
- Specify default SQL Server instance and configure the Audit Database to store your data
- Configure notification settings
- Specify the recipients who will receive daily activity summaries
- Specify a plan name

### 5.1.1. New Monitoring Plan

At this step of the wizard, specify the account that Netwrix Auditor will use to access the data source, and general settings for data collection.

### New Monitoring Plan

**Specify the account for collecting data**

User name:

Password:

Note: Make sure the account has sufficient permissions to access and collect data from your data sources. [Learn more...](#)

**Specify data collection settings**

Enable network traffic compression

Adjust audit settings automatically

Note: Netrix Auditor will continually enforce the relevant audit policies in your environment. [Learn more...](#)

Collect data for state-in-time reports

Option	Description
Specify the account for collecting data	<p>Provide a user name and a password for the account that Netrix Auditor will use to collect data. By default, the user name is prepopulated with your account name.</p> <p>Make sure the account has sufficient permissions to collect data. For a full list of the rights and permissions, and instructions on how to configure them, refer to <a href="#">Configure Data Collecting Account</a>. Netrix recommends creating a special service account with extended permissions.</p>

## 5.1.2. Default SQL Server Instance

To provide search, alerting, and report capabilities, Netrix Auditor has to store security intelligence data in the Audit Database hosted on a SQL Server instance. Make sure the **Disable security intelligence and make data available only in activity summaries** checkbox is cleared.

Specify one of the following options:

- **Install a new instance of Microsoft SQL Server Express automatically**—Select if you want Netrix Auditor to download and configure SQL Server 2014 Express with Advanced Services.

- **Use an existing SQL Server instance**—Select to continue using an installed SQL Server instance. Netwrix Auditor detects local SQL Server instance automatically and prepopulates the fields. Complete the following fields:

Option	Description
SQL Server instance	Specify the name of the SQL Server instance to store audit data.
Authentication	Select the authentication type you want to use to connect to the SQL Server instance: <ul style="list-style-type: none"> <li>• Windows authentication</li> <li>• SQL Server authentication</li> </ul>
User name	Specify the account to be used to connect to the SQL Server instance.  <b>NOTE:</b> This account must be granted the <b>database owner (db_owner)</b> role and the <b>dbcreator</b> server role. See <a href="#">Configure Audit Database Account</a> for more information.
Password	Enter a password.

### 5.1.3. Audit Database

Specify a database name to store security intelligence data for your monitoring plan, or disable this functionality. Make sure the **Disable security intelligence and make data available only in activity summaries** checkbox is cleared and **Use default SQL Server settings** is checked.

Netwrix Auditor will create a database on the SQL Server instance you specify.

### 5.1.4. Notifications

When you create the first monitoring plan, you are prompted to specify the email settings that will be used for activity and health summaries, reports and alerts delivery. For the monitoring plans that follow, Netwrix Auditor will automatically detects SMTP settings; however, for your first plan you should provide them manually. Complete the following fields:

Option	Description
SMTP server	Enter your SMTP server address. It can be your company's Exchange server or any public mail server (e.g., Gmail, Yahoo).
Port number	Specify your SMTP server port number.

Option	Description
Sender address	Enter the address that will appear in the <b>From</b> field.  <b>NOTE:</b> It is recommended to click <b>Send Test Email</b> . The system will send a test message to the specified email address and inform you if any problems are detected.
SMTP authentication	Select this checkbox if your mail server requires the SMTP authentication.
User name	Enter a user name for the SMTP authentication.
Password	Enter a password for the SMTP authentication.
Use Secure Sockets Layer encrypted connection (SSL)	Select this checkbox if your SMTP server requires SSL to be enabled.
Use implicit SSL authentication	Select this checkbox if the implicit SSL mode is used, which means that an SSL connection is established before any meaningful data is sent.

### 5.1.5. Recipients

Specify who will receive daily activity summaries that list changes that occurred for a given time period. Click **Add Recipient** and enter your email.

**NOTE:** It is recommended to click **Send Test Email**. The system will send a test message to the specified email address and inform you if any problems are detected.

### 5.1.6. Monitoring Plan Summary

Your plan is almost complete. Provide a name and description for your monitoring plan. Make sure the **Add item now** checkbox is selected. In this case, on the next step, you will be prompted to add an item for monitoring.

## 5.2. Add Items for Monitoring

Once you completed monitoring plan wizard and specified data sources, add items for monitoring.

Each data source has a dedicated item type. Netwrix Auditor automatically suggests item types associated with your data source.

## 5.2.1. AD Container

**NOTE:** For evaluation purposes, Netwrix recommends selecting **Computer** as an item for a monitoring plan. Once the product is configured to collect data from the specified items, audit settings (including Core and Compression services installation) will be applied to all computers within AD Container or IP Range.

Complete the following fields:

Option	Description
Specify AD container	<p>Specify a whole AD domain, OU or container. Click <b>Browse</b> to select from the list of containers in your network. You can also:</p> <ul style="list-style-type: none"> <li>• Select a particular computer type to be audited within the chosen AD container: <b>Domain controllers</b>, <b>Servers (excluding domain controllers)</b>, or <b>Workstations</b>.</li> <li>• Click <b>Exclude</b> to specify AD domains, OUs, and containers you do not want to audit. In the <b>Exclude Containers</b> dialog, click <b>Add</b> and specify an object.</li> </ul> <p><b>NOTE:</b> The list of containers does not include child domains of trusted domains. Use other options (<b>Computer</b>, <b>IP range</b>) to specify the target computers.</p>
Specify the account for collecting data	Select the account that will be used to collect data for this item.

## 5.2.2. Computer

Complete the following fields:

Option	Description
Specify a computer	Provide a server name by entering its FQDN, NETBIOS or IPv4 address. You can click <b>Browse</b> to select a computer from the list of computers in your network.
Specify the account for collecting data	Select the account that will be used to collect data for this item.

## 5.2.3. IP Range

**NOTE:** For evaluation purposes, Netwrix recommends selecting **Computer** as an item for a monitoring plan. Once the product is configured to collect data from the specified items, audit settings (including Core and Compression services installation) will be applied to all computers within AD Container or IP Range.

Complete the following fields:

Option	Description
Specify IP range	Specify an IP range for the audited computers. To exclude computers from within the specified range, click <b>Exclude</b> . Enter the IP subrange you want to exclude, and click <b>Add</b> .
Specify the account for collecting data	Select the account that will be used to collect data for this item.

## 6. Make Test Changes

Now that the product has collected a snapshot of the data source's current configuration state, you can make test changes to see how they will be reported by Netwrix Auditor.

For example, make the following test changes:

- Lock your computer
- Start a program as another user

**NOTE:** Before making any test changes to your environment, ensure that you have the sufficient rights, and that the changes conform to your security policy.

# 7. See How Netwrix Auditor Enables Complete Visibility

After you have made test changes to your environment, you can see how Netwrix Auditor brings security intelligence into your IT infrastructure and enables complete visibility. Take a closer look at the **Intelligence** section. It contains everything you need to enable complete visibility in your environment.

This chapter explains how to review your test changes with some of the Intelligence options and Activity Summary. Review the following for additional information:

- [Review an Activity Summary](#)
- [Review the All User Activity Report](#)
- [Browse Data with Intelligence Search](#)

## 7.1. Review an Activity Summary

Activity Summary email is generated automatically by Netwrix Auditor and lists all changes that occurred since the last Activity Summary delivery. By default, an Activity Summary is generated daily at 3:00 AM and delivered to the specified recipients.

After the data collection has completed, check your mailbox for an Activity Summary and see how your test changes are reported:

Wed 3/20/2019 2:01 PM  
 Administrator@corp.local  
 Netrix Auditor: User Activity Summary - UAVR  
 To: Administrator

**Netrix Auditor for User Activity**

Activity Summary

- Session start: 5
- Session end: 5
- Activated: 42

Action	Object type	What	Where	Who	When	Details
Activated	Elevated Window	Windows Explorer   Program Manager	workstation16.corp.local	CORP\administrator	3/19/2019 4:16:33 AM	none
Session end	User session	Lock	workstation16.corp.local	CORP\administrator	3/20/2019 3:47:57 AM	none
Session start	User session	Unlock	workstation16.corp.local	CORP\administrator	3/20/2019 3:48:06 AM	none
Session end	User session	Local session end	workstation16.corp.local	CORP\administrator	3/20/2019 3:48:10 AM	none

The example Activity Summary provide the following information:

Column	Description
Action	Shows the type of action that was performed on the object.
Object Type	Shows the type of the object.
What	Shows the title of activated window or session event.
Where	Shows the name of the server where the change occurred.
Who	Shows the name of the account under which the change was made.
When	Shows the exact time when the change occurred.
Details	Shows the before and after values of the modified object, object attributes, etc.

## 7.2. Review the All User Activity Report

The Netrix Auditor client provides a variety of predefined reports that aggregate data from the entire audited IT infrastructure or individual data sources.

Change and activity reports can be found under the **Reports** → **Predefined** → **User Activity** and provide a narrower insight into what is going on in the audited infrastructure and help you stay compliant with various standards and regulations (FISMA, HIPAA, PCI, SOX, etc.).

After collecting initial data, making test changes to your environment and running data collection again, you can take advantage of the reports functionality.

**To see how your changes are listed in the report**

1. On the main Netwrix Auditor page, navigate to **Reports** → **Predefined** → **User Activity**.
2. Select the **All User Activity** report.
3. Click **View** to open the report.

Who	Where	When	What
CORP\administrator	workstation16.corp.local	<a href="#">3/19/2019 4:16:33 AM</a>	Windows Explorer   Program Manager
CORP\administrator	workstation16.corp.local	<a href="#">3/20/2019 3:47:57 AM</a>	Session end
CORP\administrator	workstation16.corp.local	<a href="#">3/20/2019 3:48:06 AM</a>	Session start
CORP\administrator	workstation16.corp.local	<a href="#">3/20/2019 3:48:10 AM</a>	Session end

## 7.3. Browse Data with Intelligence Search

Netwrix Auditor delivers complete visibility into your IT infrastructure. Its convenient interactive search interface enables you to investigate incidents and browse data collected across the entire IT infrastructure. When running a search, you are not limited to a certain data source, change type, or object name. You can create flexible searches that provide you with precise results on *who* changed *what*, and *when* and *where* each change was made.

After collecting initial data, making test changes to your environment and running data collection again, you can review changes in details with Intelligence search.

**To browse your audit data and see you test changes**

1. On the main Netwrix Auditor page, navigate to **Intelligence** → **Search**.
2. Add search filters to your search by clicking on a corresponding icon and providing a value. By default, all entries that contain this filter value are shown. For an exact match, use quotation marks.

Filters are used to narrow your search results. To create a unique set of filters, you can:

- Add different filters to your search. Search results will be sorted by all selected filters since they work as a logical conjunction (e.g., **Who: Administrator** AND **Action: Added**).
- Specify several values in the same filter to search for any of them (e.g., **Action: Modified** OR **Action: Removed**). To do this, select a filter again and specify a new value.

For example, consider adding these filters:

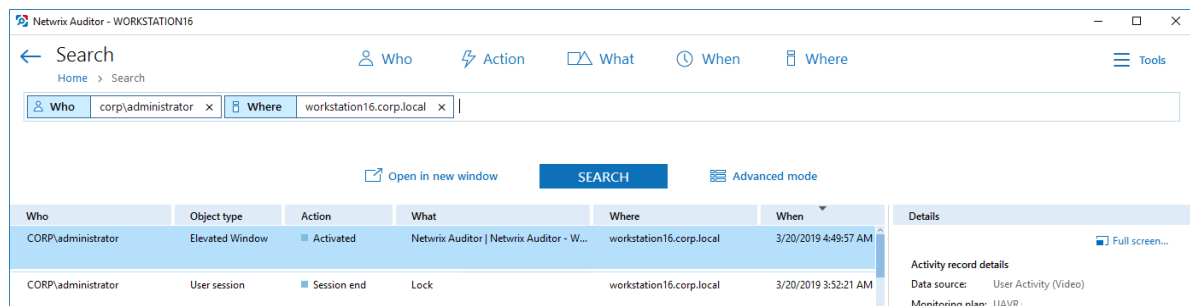

Filter	Value
 <b>WHO</b>	Specify your account name, as you performed test changes.
 <b>WHERE</b>	Specify your server.

**NOTE:** Refer to [Netwrix Online Helpcenter](#) for detailed instructions on how to apply filters and change match types.

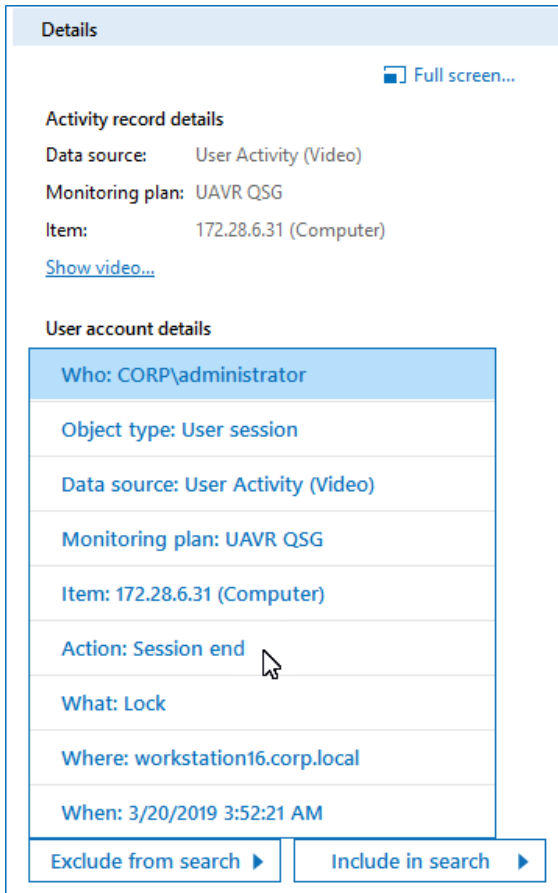

As a result, you will see the following filters in the **Search** field:

3. Click **Search**.

4. Now, you can narrow your search and modify it right from the search results pane. Click any entry that contains excess data, select **Exclude from search** in the **Details** section and specify a filter, e.g., **Action: Session end** to leave information on elevated windows only.

Your **Search** field will be updated, the **Action not** filter will be added. Make sure to click **Search** again to update your search results.

5. Having reviewed your search results, navigate to **Tools**.

- Click **Save as report** to save the selected set of filters. This search will be added to the **Custom** section inside **Reports**, so that you will be able to access it instantly. Refer to [Custom Search-Based Reports](#) for detailed instructions on how to create saved searches.
- Click **Create alert** to get instant email or SMS notifications on suspicious activity that matches your current search criteria. You only need to specify a name for a new alert, add recipient and assign a risk score. The selected set of search criteria will be associated with the new alert automatically. Refer to [Alerts](#) for detailed instructions on how to create and configure alerts.

Try making more similar test changes to provoke an alert. For example:

Wed 3/20/2019 4:48 PM  
**Administrator**  
**Netwrix Auditor Alert: Elevated Windows**

To  Administrator
