# 1. Introduction

This guide is intended for the first-time users of Netwrix Auditor for Oracle Database. It can be used for evaluation purposes, therefore, it is recommended to read it sequentially, and follow the instructions in the order they are provided. After reading this guide you will be able to:

- Install and configure Netwrix Auditor
- Create a monitoring plan to start auditing Oracle Database
- Launch data collection
- See how Netwrix Auditor enables complete visibility

**NOTE:** This guide only covers the basic configuration and usage options for auditing Oracle Database with Netwrix Auditor. For advanced installation scenarios and configuration options, as well as for information on various reporting possibilities and other product features, refer to [Netwrix Online Help Center](#).

## 1.1. Netwrix Auditor Features and Benefits

Netwrix Auditor is a visibility platform for user behavior analysis and risk mitigation that enables control over changes, configurations and access in hybrid IT environments to protect data regardless of its location. The platform provides security analytics to detect anomalies in user behavior and investigate threat patterns before a data breach occurs.

Netwrix Auditor includes applications for Active Directory, Active Directory Federation Services, Azure AD, Exchange, Office 365, Windows file servers, EMC storage devices, NetApp filer appliances, Nutanix Files, network devices, SharePoint, Oracle Database, SQL Server, VMware, Windows Server, and User Activity. Empowered with a RESTful API, the platform delivers visibility and control across all of your on-premises or cloud-based IT systems in a unified way.

Major benefits:

- Detect insider threats—on premises and in the cloud
- Pass compliance audits with less effort and expense
- Increase productivity of IT security and operations teams

To learn how Netwrix Auditor can help you achieve your specific business objectives, refer to [Netwrix Auditor Best Practices Guide](#).

Netwrix Auditor for Oracle Database detects and reports on all changes made to your Oracle Database instance configuration, privileges, and security settings, including database objects and directories, user accounts, audit policies, sensitive data, and triggers. The product also reports on failed and successful access attempts.

## 2. Prerequisites and System Requirements

This section lists the requirements for the systems that are going to be audited with Netwrix Auditor, and for the computer where the product is going to be installed.

To learn about Netwrix Auditor licenses, refer to the following Netwrix Knowledge Base article: [Netwrix Auditor Licensing FAQs](#). To learn how to install a license, refer to [Licenses](#).

To learn about ports and protocols required for product operation, refer to [Protocols and Ports Required for Netwrix Auditor](#).

To learn about security roles and permissions required for product operation, refer to [Configure Netwrix Auditor Service Accounts](#).

### 2.1. Supported Data Sources

The table below lists systems that can be monitored with Netwrix Auditor for Oracle Database:

Data source	Supported Versions
Oracle Database	<ul style="list-style-type: none"><li>• Oracle Database 11g</li><li>• Oracle Database 12c On-Premise (all editions)</li><li>• Oracle Database 18c On-Premise</li><li>• Oracle Database 19c On-Premise</li><li>• Oracle Database Cloud Service (Enterprise Edition)</li></ul>

### 2.2. Requirements to Install Netwrix Auditor

This section provides the requirements for the computer where Netwrix Auditor is going to be installed. Refer to the following sections for detailed information:

- [Hardware Requirements](#)
- [Software Requirements](#)

#### 2.2.1. Hardware Requirements

This section provides rough estimations of the resources required for Netwrix Auditor PoC or evaluation deployment. Consider that actual hardware requirements will depend on your monitored infrastructure,

the number of users in your environment, and activities that occur in the infrastructure per day.

The metrics provided in this section are valid for clean installation on a server without any additional roles or third part applications installed on it. The use of virtual machine is recommended.

Below you can find rough estimations, calculated for evaluation of Netwrix Auditor for Oracle Database. Refer to [Netwrix Online Help Center](#) for complete information on the Netwrix Auditor hardware requirements.

You can deploy Netwrix Auditor on a virtual machine running Microsoft Windows guest OS on the corresponding virtualization platform, in particular:

- VMware vSphere
- Microsoft Hyper-V
- Nutanix AHV

Note that Netwrix Auditor supports only Windows OS versions listed in the [Software Requirements](#) section.

Hardware component Starter, evaluation, or small environment	
Processor	2 cores
RAM	4 GB
Disk space	100 GB—System drive
	100 GB—Data drive (Long-Term Archive and SQL Server)
Screen resolution	Minimum 1280 x 1024
	Recommended 1920 x 1080 or higher

## 2.2.2. Software Requirements

The table below lists the software requirements for the Netwrix Auditor installation:

Component	Requirements
Operating system	Windows Server OS: <ul style="list-style-type: none"><li>• Windows Server 2019</li><li>• Windows Server 2016</li><li>• Windows Server 2012 R2</li><li>• Windows Server 2012</li></ul>

Component	Requirements
	Windows Desktop OS (64-bit): <ul style="list-style-type: none"> <li>Windows 10</li> <li>Windows 8.1</li> </ul>
.NET Framework	<ul style="list-style-type: none"> <li>.NET Framework <a href="#">4.5</a> and above.</li> </ul>
Installer	<ul style="list-style-type: none"> <li><a href="#">Windows Installer 3.1</a> and above</li> </ul>

### 2.2.2.1. Additional Components

In order to monitor some data sources, you may be required to install additional software components.

Data source	Components
<ul style="list-style-type: none"> <li>Oracle Database</li> </ul>	<p><i>On the computer where Netwrix Auditor Server is installed:</i></p> <ul style="list-style-type: none"> <li><a href="#">Microsoft Visual C++ 2010 Redistributable Package</a>—can be installed automatically during the monitoring plan creation.</li> <li>Oracle Data Provider for .NET and Oracle Instant Client</li> </ul> <p>Netwrix recommends downloading the package <a href="#">64-bit Oracle Data Access Components 12c Release 4 (12.1.0.2.4) for Windows x64 (ODAC121024_x64.zip)</a>. Run the setup and select the <b>Data Provider for .NET</b> checkbox. Oracle Instant Client will be installed as well. Also, make sure the <b>Configure ODP.NET and/or Oracle Providers for ASP.Net at machine-wide level</b> checkbox is selected on the <b>ODP.NET (Oracle Data Provider)</b> step.</p>

## 3. Review Components Checklist

To speed up the evaluation process, Netwrix recommends you to ensure that the following services and components are up and running prior to the Netwrix Auditor installation.

Service or component	Recommendations
Network and target systems or servers that work as your data sources	Test connectivity to your data source. Make sure you can access it by its NetBIOS and FQDN name from the computer where you intend to install Netwrix Auditor—use the nslookup command-line tool to look up domain names.
SQL Server with Reporting Services (or Advanced Services) 2008 or higher.	<p>Supported SQL Server versions are listed <a href="#">here</a>.</p> <p>Consider maximum database size in different versions. Make your choice based on the size of the environment you are going to monitor, the number of users, and other factors. Remember that maximum database size in Express editions may be insufficient.</p> <p><b>NOTE:</b> Although Netwrix Auditor provides a convenient way to download SQL Server 2014 Express edition right from the product, it is recommended to deploy SQL Server instance in advance.</p> <p>If installed separately, remember to test SQL Server connectivity.</p>
Test account	<p>Netwrix recommends you to create a special account with extensive privileges. This account should have sufficient permissions to:</p> <ul style="list-style-type: none"> <li>• Collect audit data. See <a href="#">Configure Data Collecting Account</a> for more information.</li> <li>• Access data stored in the SQL Server instance: <ul style="list-style-type: none"> <li>• The account must be assigned the <b>Database owner (db_owner)</b> role and the <b>dbcreator</b> server role.</li> <li>• The account must be assigned the <b>Content Manager</b> role on the SSRS Home folder.</li> </ul> </li> <li>• Make test changes in your environment.</li> </ul>

### 3.1. Configure Data Collecting Account

This service account is used to collect audit data from the data source items; it is specified during the monitoring plan creation.

Netwrix recommends creating a special service account for that purpose. Depending on the data source your monitoring plan will process, the account must meet the corresponding requirements.

**NOTE:** The information in this section is outside the quick-start guide scope and is provided for reference only. For detailed instructions on how to configure the data collecting account to access your audited platform or application, see [Netwrix Auditor Online Help Center](#) .

Data source	Required rights and permissions:
Oracle Database	<a href="#">For Oracle Database Auditing</a>

## 4. Configure Oracle Database for Monitoring

Before you start monitoring your Oracle Database with Netwrix Auditor, arrange your environment. Depending on your current database version and edition, Oracle provides different types of auditing:

- **Standard Auditing**—For Oracle Database 11g. In Standard Auditing, you use initialization parameters and the `AUDIT` and `NOAUDIT` SQL statements to audit SQL statements, privileges, schema objects, network and multitier activities. See [Configure Oracle Database 11g for Auditing](#) for more information.
- **Unified Auditing**—Recommended for Oracle Database 12c, 18c, 19c. Unified Auditing consolidates all auditing into a single repository and view. This provides a two-fold simplification: audit data can now be found in a single location and all audit data is in a single format. See [Configure Oracle Database 12c, 18c, 19c for Auditing](#) for more information.
- **Fine Grained Auditing**—Available for Oracle Database Enterprise Edition only. Allows auditing of actions associated with columns in application tables along with conditions necessary for an audit record to be generated. It helps focus on security-relevant columns and rows and ignore areas that are less important. See [Configure Fine Grained Auditing](#) for more information.

If you are unsure of your audit settings, refer to the following section:

- [Verify Your Oracle Database Audit Settings](#)

Also, remember to do the following:

1. Configure Data Collecting Account, as described in [Grant Create Session and Select Privileges to Account](#)
2. Configure required protocols and ports, as described in [Protocols and Ports Required for Monitoring Oracle Database](#)

### 4.1. Configure Oracle Database 11g for Auditing

Perform the following steps to configure Standard Auditing on your Oracle Database:

- Select audit trail to store audit records. The following options are available in Oracle Database:

Audit trail	Description
Database audit trail	Set by default.
XML audit trail	Netwrix recommends to store audit records to XML audit trail. In this case, the product will report on actions performed by users with <code>SYSDBA</code> and <code>SYSOPER</code> privileges. Otherwise, these actions will not be audited.
OS files	Current version of Netwrix Auditor does not support this configuration.

- Enable auditing of selected Oracle Database parameters.

### **To select audit trail to store audit records**

1. On the computer where your database is deployed, run the **sqlplus** tool.
2. Connect to your Oracle Database—use Oracle account with the `SYSDBA` privilege. For example:

```
OracleUser as sysdba
```

Enter your password.

3. Select where to store audit records.

Review the following for additional information:

To...	Execute the following command...
Store audit records to database audit trail. This is default configuration for Oracle Database.	<pre>ALTER SYSTEM SET audit_trail=DB SCOPE=SPFILE;</pre> <p><b>NOTE:</b> In this case, actions performed by user <code>SYS</code> and users connecting with <code>SYSDBA</code> and <code>SYSOPER</code> privileges will not be audited.</p>
<b>NOTE:</b> If you want to store audit records to database audit trail, do not run this command.	
Store audit records to XML audit trail.	<pre>ALTER SYSTEM SET audit_trail=XML SCOPE=SPFILE;</pre> <p><b>NOTE:</b> If you want to enable auditing of actions performed by user <code>SYS</code> and users connecting with <code>SYSDBA</code> and <code>SYSOPER</code> privileges, execute the following command:</p> <pre>ALTER SYSTEM SET audit_sys_operations=TRUE SCOPE=SPFILE;</pre>

To...	Execute the following command...
Store audit records to XML or database audit trail and keep full text of SQL-specific query in audit records.	<p>For database audit trail:</p> <pre>ALTER SYSTEM SET audit_trail=DB, EXTENDED SCOPE=SPFILE;</pre> <p>For XML audit trail:</p> <pre>ALTER SYSTEM SET audit_trail=XML, EXTENDED SCOPE=SPFILE;</pre>
<b>NOTE:</b> Only ALTER actions will be reported.	

#### 4. Restart the database:

```
SHUTDOWN IMMEDIATE
```

```
STARTUP
```

**NOTE:** You do not need to restart the database if you changed auditing of objects. You only need to restart the database if you made a universal change, such as turning on or off all auditing. If you use Oracle Real Application Clusters (RAC), see the [Starting and Stopping Instances and Oracle RAC Databases](#) section in **Real Application Clusters Administration and Deployment Guide** for more information on restarting your instances.

### To enable auditing of Oracle Database changes

1. On the computer where your database is deployed, run the **sqlplus** tool.
2. Connect to your Oracle Database—use Oracle account with the SYSDBA privilege. For example:

```
OracleUser as sysdba
```

Enter your password.

3. Enable auditing of selected parameters.

Review the following for additional information:

To monitor...	Execute the command...
Configuration changes	<ul style="list-style-type: none"> <li>• For any user: <pre>AUDIT ALTER SYSTEM, SYSTEM AUDIT, SESSION, TABLE, USER, VIEW, ROLE, PROCEDURE, TRIGGER, PROFILE, DIRECTORY, MATERIALIZED VIEW, SYSTEM GRANT, NOT EXISTS, ALTER TABLE, GRANT DIRECTORY, GRANT PROCEDURE, GRANT TABLE;</pre> <pre>AUDIT ALTER DATABASE, FLASHBACK ARCHIVE ADMINISTER;</pre> </li> <li>• For specific user: <pre>AUDIT SYSTEM GRANT, SESSION, TABLE, PROCEDURE BY</pre> </li> </ul>

To monitor...

Execute the command...

`<USER_NAME>;`**NOTE:** You can specify several users separated by commas.Successful and  
failed data access  
and changes`AUDIT SELECT, INSERT, DELETE, UPDATE, RENAME,  
FLASHBACK ON <TABLE_NAME>;`**NOTE:** After an audit parameter has been enabled or disabled, the product starts collecting data after succeeding logon session.For additional information on `ALTER SYSTEM` and `AUDIT` parameters, see the following Oracle database administration documents:

- [AUDIT TRAIL](#)
- [AUDIT](#)

Currently, Netwrix Auditor checks audit settings for Standard Auditing when configured to audit specified operations. If any of your current settings conflict with the audit configuration required for Netwrix Auditor, these conflicts will be listed in the **Netwrix Auditor System Health** event log.

## 4.2. Configure Oracle Database 12c, 18c, 19c for Auditing

The following auditing modes are available for Oracle Database 12c, 18c, 19c:

- **Mixed Mode**—Default auditing in a newly installed database. It enables both traditional and the new Unified audit facilities. Netwrix recommends not to use Mixed Mode auditing together with Netwrix Auditor. If you want to leave it as it is, make sure that your audit records are stored to the XML audit trail, otherwise Netwrix Auditor will not be able to collect changes made with `SYSDBA` or `SYSOPER` privilege.

**NOTE:** The product does not log any errors on these events to the **Netwrix Auditor System Health** log.

- **Unified Auditing**—Recommended. See the following Oracle technical article for detailed instructions on how to enable Unified Auditing: [Enabling Unified Auditing](#).

Perform the following steps to configure Unified Auditing on your Oracle Database:

- Create and enable an audit policy to audit specific parameters across your Oracle Database.

**NOTE:** After an audit policy has been enabled or disabled, the product starts collecting data after succeeding logon session.

- If needed, create and enable specific audit policies to audit successful data access and changes, user actions, component actions, etc.

*To configure Oracle Database 12c, 18c, 19c Unified Auditing*

1. On the computer where your database is deployed, run the **sqlplus** tool.
2. Connect to your Oracle Database—use Oracle account with the SYSDBA privilege. For example:

```
OracleUser as sysdba
```

Enter your password.

## 3. Create and enable audit policies. Review the following for additional information:

To monitor...	Execute the command...
Configuration changes	<ul style="list-style-type: none"> <li>Create an audit policy (e.g., <code>nwx_actions_pol</code>) for any user: <pre>CREATE AUDIT POLICY nwx_actions_pol ACTIONS CREATE TABLE,DROP TABLE,ALTER TABLE,GRANT,REVOKE, CREATE VIEW,DROP VIEW,CREATE PROCEDURE, ALTER PROCEDURE,RENAME,AUDIT,NOAUDIT, ALTER DATABASE,ALTER USER,ALTER SYSTEM, CREATE USER,CREATE ROLE,SET ROLE,DROP USER, DROP ROLE,CREATE TRIGGER,ALTER TRIGGER, DROP TRIGGER,CREATE PROFILE,DROP PROFILE, ALTER PROFILE,DROP PROCEDURE, CREATE MATERIALIZED VIEW,DROP MATERIALIZED VIEW, ALTER ROLE,TRUNCATE TABLE,CREATE FUNCTION, ALTER FUNCTION,DROP FUNCTION,CREATE PACKAGE, ALTER PACKAGE,DROP PACKAGE,CREATE PACKAGE BODY, ALTER PACKAGE BODY,DROP PACKAGE BODY,LOGON,LOGOFF, CREATE DIRECTORY,DROP DIRECTORY,CREATE JAVA, ALTER JAVA,DROP JAVA,PURGE TABLE, CREATE PLUGGABLE DATABASE,ALTER PLUGGABLE DATABASE, DROP PLUGGABLE DATABASE,CREATE AUDIT POLICY, ALTER AUDIT POLICY,DROP AUDIT POLICY, CREATE FLASHBACK ARCHIVE,ALTER FLASHBACK ARCHIVE, DROP FLASHBACK ARCHIVE;</pre> </li> <li>Enable the audit policy: <pre>AUDIT POLICY nwx_actions_pol;</pre> </li> </ul>
Data access and changes (successful and failed)	<ul style="list-style-type: none"> <li>Create the audit policy (e.g., <code>nwx_actions_obj_pol</code>): <pre>CREATE AUDIT POLICY nwx_actions_obj_pol ACTIONS DELETE on hr.employees, INSERT on hr.employees, UPDATE on hr.employees, SELECT on hr.employees, FLASHBACK on hr.employees CONTAINER = CURRENT;</pre> </li> <li>Enable the audit policy (e.g., <code>nwx_actions_obj_pol</code>): <pre>AUDIT POLICY nwx_actions_obj_pol;</pre> </li> </ul>
Component actions: Oracle Data Pump, Oracle Recovery Manager, and Oracle SQL*Loader	<ul style="list-style-type: none"> <li>Create the audit policies (e.g., <code>nwx_sqlloader_dp_pol</code>, etc.): <p><b>NOTE:</b> No special configuration required to audit RMAN events.</p> <pre>CREATE AUDIT POLICY nwx_datapump_expimp_pol ACTIONS COMPONENT=DATAPUMP ALL;</pre> <pre>CREATE AUDIT POLICY nwx_sqlloader_dp_pol ACTIONS COMPONENT=DIRECT_LOAD LOAD;</pre> </li> </ul>

To monitor...	Execute the command...
---------------	------------------------

Direct Path Load	<ul style="list-style-type: none"> <li>• Enable these policies:</li> </ul>
---------------------	--

```
AUDIT POLICY nwx_datapump_expimp_pol;
```

```
AUDIT POLICY nwx_sqlloader_dp_pol;
```

For additional information on `CREATE AUDIT POLICY` and `AUDIT POLICY` parameters, see the following Oracle Database administration documents:

- [CREATE AUDIT POLICY](#)
- [AUDIT POLICY](#)

Currently, Netwrix Auditor checks audit settings for Unified Auditing when accountability is enabled for `ACTIONS`. If any of your current settings conflict with the audit configuration required for Netwrix Auditor, these conflicts will be listed in the **Netwrix Auditor System Health** event log.

## 4.3. Configure Fine Grained Auditing

When configuring Fine Grained Auditing, you need to create an audit policy with required parameters set. The procedure below contains instructions on how to create, disable and delete such audit policies.

**NOTE:** Fine Grained audit policies can be configured for Oracle Database Enterprise Edition only. Keep in mind that if you have Fine Grained policies configured, you will receive a permanent error in the **Netwrix Auditor System Health** log because Netwrix Auditor cannot detect it. Use Unified and Standard audit policies to keep track of data changes.

### *To configure Fine Grained Auditing*

Below is an example of Fine Grained audit policy that enables auditing of audit statements (`INSERT`, `UPDATE`, `DELETE`, and `SELECT`) on table `hr.emp` to audit any query that accesses the `salary` column of the employee records that belong to `sales` department. Review the following for additional information:

To...	Execute the following command...
To create audit policy	<pre>EXEC DBMS_FGA.ADD_POLICY(object_schema =&gt; 'hr', object_name =&gt; 'emp', policy_name =&gt; 'chk_hr_emp', audit_condition =&gt; 'dept = ''SALES'' ', audit_column =&gt; 'salary', statement_types =&gt; 'INSERT,UPDATE,DELETE,SELECT');</pre>
To disable audit policy	<pre>EXEC DBMS_FGA.DISABLE_POLICY(object_schema =&gt; 'hr', object_name =&gt; 'emp', policy_name =&gt; 'chk_hr_emp');</pre>
To delete audit policy	<pre>EXEC DBMS_FGA.DROP_POLICY(object_schema =&gt; 'hr', object_name =&gt; 'emp', policy_name =&gt; 'chk_hr_emp');</pre>

**NOTE:** Refer to Oracle documentation for additional information on Fine Grained Auditing.

## 4.4. Verify Your Oracle Database Audit Settings

You can verify your Oracle Database audit settings manually. Do one of the following, depending on your Oracle Database version and edition.

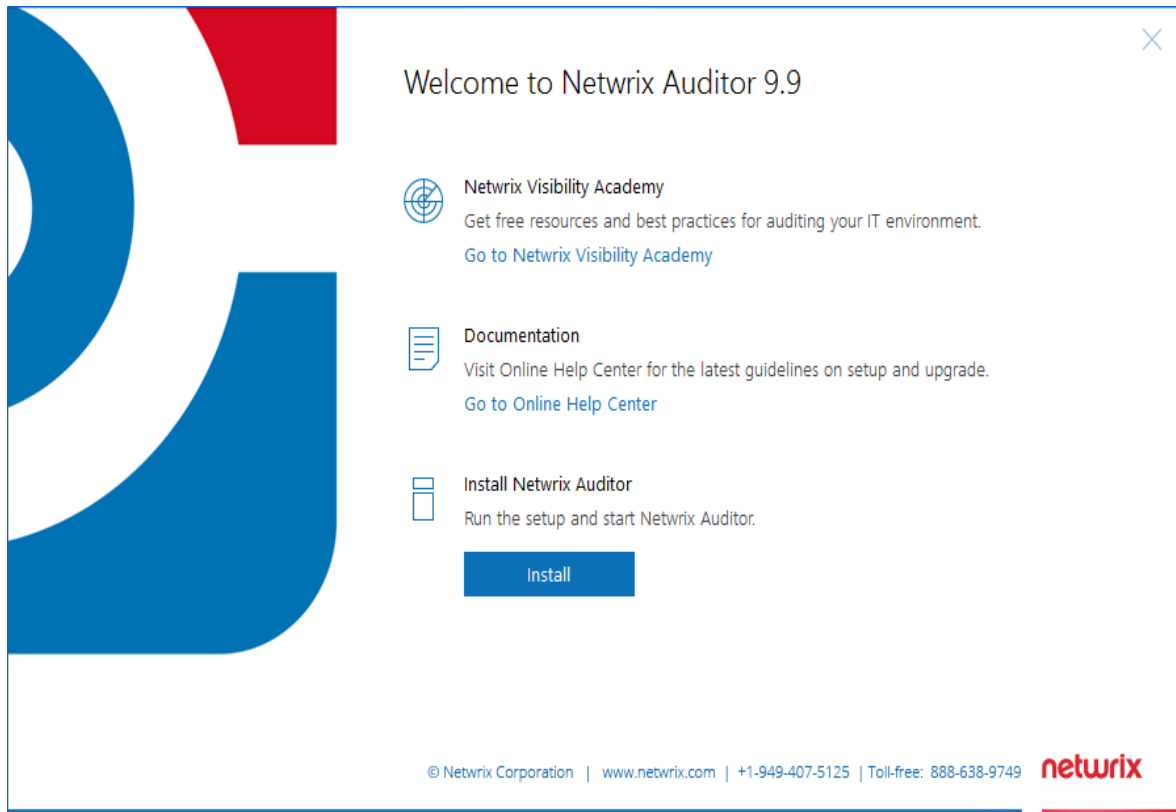

Oracle Database version/edition	Command
Oracle Database 11g (Standard Auditing)	<pre>SELECT audit_option, success, failure FROM dba_stmt_audit_opts;</pre> <p><b>NOTE:</b> To review your initialization parameters, execute the following command:</p> <pre>SHOW PARAMETERS audit%r;</pre>
Oracle Database 12c, 18c, 19c (Unified Auditing)	<pre>select USER_NAME, ENABLED_OPT, SUCCESS, FAILURE from AUDIT_UNIFIED_ENABLED_POLICIES;</pre>
Oracle Database Enterprise Edition (Fine Grained Auditing)	<pre>SELECT POLICY_NAME, ENABLED from DBA_AUDIT_POLICIES;</pre>

**NOTE:** If you want to clean your audit settings periodically, refer to the following Oracle Help Center article for more information: [Database PL/SQL Packages and Types Reference](#).

# 5. Install the Product

## To install Netwrix Auditor

1. Download Netwrix Auditor 9.9 from [Netwrix website](#).
2. Unpack the installation package. The following window will be displayed on successful operation completion:

3. Follow the instructions of the setup wizard. When prompted, accept the license agreement.
4. On the **Select Installation Type** step, select **Full installation**.
5. On the **Destination Folder** step, specify the installation folder.
6. On the **Netwrix Customer Experience Program** step, you are invited to take part in the Netwrix Customer Experience Program. It is optional on your part to help Netwrix improve the quality, reliability, and performance of Netwrix products and services. If you accept, Netwrix collects statistical information on how the Licensee uses the product in accordance with applicable law. Select **Skip** if you do not want to participate in the program.

**NOTE:** You can always opt-out of the Netwrix Customer Experience Program later. See [Netwrix Online Helpcenter](#) for instructions on how to cancel participation in the program.

7. Click **Install**.

After a successful installation, Netwrix Auditor shortcut will be added to the **Start** menu/screen and the product will start.

## 6. Monitoring Plans

To start auditing your environment and analyzing user behavior with Netwrix Auditor, create a monitoring plan. All your monitoring plans are listed in the **Monitoring Plans** section.

A monitoring plan defines your data sources and general data collection, notification, and storage settings. To start collecting data, choose a data source, such as Oracle Database, and add items to its scope. Item is a specific object you want to audit. All data sources and items in your plan share common settings so that you can supervise and manage several data collections as one.

On a high level, you should perform the following steps to start monitoring your environment:

1. Specify a data source and create a monitoring plan with a wizard. See [Create a New Plan](#) for more information.
2. Add items for monitoring. Netwrix Auditor does not collect data until you specify an item. See [Add Items for Monitoring](#) for more information.

### 6.1. Create a New Plan

On the main Netwrix Auditor page, click the **All data sources** tile in the **Quick Start** section.

Then follow the steps of the Monitoring Plan Wizard:

- Choose a data source for monitoring
- Specify an account for collecting data
- Specify default SQL Server instance and configure the Audit Database to store your data
- Configure notification settings
- Specify the recipients who will receive daily activity summaries
- Specify a plan name

#### 6.1.1. Settings for Data Collection

At this step of the wizard, specify the account that Netwrix Auditor will use to access the data source, and general settings for data collection.

Option	Description
Specify the account for collecting data	<p>Provide a user name and a password for the account that Netwrix Auditor will use to collect data. By default, the user name is prepopulated with your account name.</p> <p>Make sure the account has sufficient permissions to collect data. For a full list</p>

Option	Description
	of the rights and permissions, and instructions on how to configure them, refer to <a href="#">Configure Data Collecting Account</a> . Netwrix recommends creating a special service account with extended permissions.

## 6.1.2. Default SQL Server Instance

To provide searching, alerting and reporting capabilities, Netwrix Auditor needs an SQL Server where audit data will be stored in the databases. To store data from the data sources included in the monitoring plan, the wizard creates an Audit Database for each plan. At this step, you should specify the default SQL Server instance that will host Netwrix Auditor databases. To read more, refer to [SQL Server and Audit Database](#).

**NOTE:** Alternatively, you can instruct Netwrix Auditor not to store data to the databases but only to the repository (Long-Term Archive) – in this scenario, you will only be able to receive activity summaries. Reporting and alerting capabilities will not be provided.

**NOTE:** Make sure the **Disable security intelligence and make data available only in activity summaries** checkbox is cleared.

Select one of the following options:

- **Install a new instance of Microsoft SQL Server Express automatically** — this option is available at the first run of the wizard. It allows you to deploy SQL Server 2016 SP2 Express with Advanced Services on the local machine. This SQL Server will be used as default host for Netwrix Auditor databases.
- **Use an existing SQL Server instance** — select this option to use an existing SQL Server instance.

**NOTE:** Local SQL Server instance is detected automatically, and input fields are pre-populated with its settings.

Complete the following fields:

Option	Description
SQL Server instance	Specify the name of the SQL Server instance to store audit data.
Authentication	Select the authentication type you want to use to connect to the SQL Server instance: <ul style="list-style-type: none"> <li>• Windows authentication</li> <li>• SQL Server authentication</li> </ul>
User name	Specify the account to be used to connect to the SQL Server instance.

Option	Description
<p><b>NOTE:</b> This account must be granted the <b>database owner (db_owner)</b> role and the <b>dbcreator</b> server role.</p>	
Password	Enter a password.

### 6.1.3. Database Settings

At this step, you need to specify a database where Netwrix Auditor will store data collected from the data sources included in this monitoring plan.

**NOTE:** It is strongly recommended to target each monitoring plan at a separate database.

Make sure the **Disable security intelligence and make data available only in activity summaries** checkbox is cleared and **Use default SQL Server settings** is checked.

#### Audit Database

Specify the database to store your data and configure settings.

☐ Disable security intelligence and make data available only in activity summaries

Database:

☐ Use default SQL Server settings

☒ Specify custom connection parameters

Authentication:

User name:

Password:

Configure the following:

Setting	Description
Disable security intelligence ...	<p>Only select this option if you do not want your data to be stored in the database. In this case, you will only be able to receive activity summaries. Reporting and alerting capabilities will not be provided.</p> <p>To store data to the database, leave this check box cleared.</p>
Database	<p>Default database name is <i>Netwrix_Auditor_&lt;monitoring_plan_name&gt;</i>.</p> <p>It is recommended that you enter a meaningful name for the database here. It may include the data source type (e.g. <i>Exchange_Audit_Data</i> or <i>OracleSrv02_Audit_Data</i>), or so.</p> <p>If you decided to use the existing SQL Server instance instead of dedicated, you may want to use <i>Netwrix_Auditor</i> prefix to distinguish Netwrix Auditor databases from others.</p>
Use default SQL Server settings	Select this option if you want Netwrix Auditor to connect to the SQL Server instance using the default settings you specified <a href="#">Default SQL Server Instance</a> .
Specify custom connection parameters	<p>Select this option to use custom credentials when connecting to SQL Server. Specify authentication method and the account that Netwrix Auditor will use.</p> <p>Make sure this account has sufficient rights to connect to SQL Server and work with the databases. See <a href="#">Configure Audit Database Account</a> for details.</p>

Netwrix Auditor will connect to the default SQL Server instance and create a database with the specified name on it.

**NOTE:** Global settings that apply to all databases with audit data (including retention period and SSRS server used for reporting) are available on the **Audit Database** page of Netwrix Auditor settings. See [Audit Database](#) for details.

## 6.1.4. SMTP Server Settings

When you create the first monitoring plan, you are prompted to specify the email settings that will be used for activity and health summaries, reports and alerts delivery. For the monitoring plans that follow, Netwrix

Auditor will automatically detect SMTP settings; however, for your first plan you should provide them manually. See [this section](#) for details.

### 6.1.5. Email Notification Recipients

Specify who will receive daily emails: [Activity Summary Email](#) on changes in the monitored infrastructure, and [Health Summary Email](#) on Netwrix Auditor operations and health.

Click **Add Recipient** and enter your email.

**NOTE:** It is recommended to click **Send Test Email**. The system will send a test message to the specified email address and inform you if any problems are detected.

### 6.1.6. Monitoring Plan Summary

At this step of the wizard, to provide a meaningful name and optional description for your monitoring plan.

To start collecting data, you should specify the objects (items) that belong to the target data source and should be processed according to the settings of this monitoring plan. For example, for Exchange data source the item will be your Exchange server, for Windows Server data source - computer, IP range or AD container, and so on. To add items right after finishing the monitoring plan wizard, select the **Add item now** checkbox. See [Add Items for Monitoring](#) for details.

Oracle Database data source requires additional system components and updates to be installed on your computer. If you have not installed them before, Netwrix Auditor will inform you and prompt you to check data source prerequisites instead of adding an item. Review required components on the **Oracle Database** data source page, deploy them, and then click **Save&Close**. You will see your newly created plan; click **Add item** under your **Oracle Database** data source.

**NOTE:** Netwrix Auditor for Oracle Database incompatible with Oracle Data Access Components for .Net Framework 4.0 and above. Check that the .Net Framework 3.5 feature is enabled prior to downloading prerequisites.

## 6.2. Add Items for Monitoring

Once you completed monitoring plan wizard and specified data sources, add items for monitoring.

Each data source has a dedicated item type. Netwrix Auditor automatically suggests item types associated with your data source.

### 6.2.1. Oracle Database Instance

Complete the following fields:

Option	Description
Specify Oracle Database instance	Provide connection details in the following format: <i>host:port/service_name</i> . Make sure audit settings are configured for your Oracle Database instance.
Specify the account for collecting data	Select the account that will be used to collect data for this item.

## 7. Make Test Changes

Now that the product has collected a snapshot of the data source's current configuration state, you can make test changes to see how they will be reported by Netwrix Auditor.

**NOTE:** Before making any test changes to your environment, ensure that you have the sufficient rights, and that the changes conform to your security policy.

For example, make the following test changes:

- Create a new user
- Create a new role

## 8. See How Netwrix Auditor Enables Complete Visibility

After you have made test changes to your environment, you can see how Netwrix Auditor brings security intelligence into your IT infrastructure and enables complete visibility. Take a closer look at the **Intelligence** section. It contains everything you need to enable complete visibility in your environment.

This chapter explains how to review your test changes with some of the Intelligence options and Activity Summary. Review the following for additional information:

- [Review an Activity Summary](#)
- [Review Overview Dashboard](#)
- [Review the All Changes Report](#)
- [Browse Data with Intelligence Search](#)

In order not to wait for a scheduled Activity Summary generation, force data collection and email delivery.

### *To launch data collection manually*

1. Navigate to **Monitoring Plans** and select your plan in the list.
2. Click **Edit**.
3. In the your monitoring plan settings, click **Update** in the right pane.
4. Check your mailbox for an email notification and make sure that the data collection has completed successfully.

## 8.1. Review an Activity Summary

Activity Summary email is generated automatically by Netwrix Auditor and lists all changes that occurred since the last Activity Summary delivery. By default, an Activity Summary is generated daily at 3:00 AM and delivered to the specified recipients. You can also launch data collection and Activity Summary generation manually.

After the data collection has completed, check your mailbox for an Activity Summary and see how your test changes are reported:

**Netwrix Auditor for Oracle Database**

- Failed Logon 0

Action	Object type	What	Item	Where	Who	When	Workstation	Details
■ Added	Role	C##ROLE1	stationwin10:1521/oracle	stationwin10	orcluser	4/14/2017 10:48:34 AM	stationwin10	Action name: "CREATE ROLE" Container name: "CDB\$ROOT" Database user: "SYS" Privilege for action: "SYSDBA" Program name: "SQL Developer" Session ID: "2272038821" Unified policy name: "ORA_SECURECONFIG"
■ Added	User	C##MANAGER	stationwin10:1521/oracle	stationwin10	orcluser	4/14/2017 10:49:31 AM	stationwin10	Action name: "CREATE USER" Container name: "CDB\$ROOT" Database user: "SYS" Privilege for action: "SYSDBA" Program name: "SQL Developer" Session ID: "2272038821" Unified policy name: "ORA_SECURECONFIG"

The example Activity Summary provides the following information:

Column	Description
Action	Shows the type of action that was performed on the object.
Object Type	Shows the type of the object.
What	Shows the name of the changed object or its path.
Item	Shows the item associated with the selected monitoring plan.
Where	Shows the name of Oracle Database instance where the change occurred.
Who	Shows the name of the account under which the change was made.

Column	Description
When	Shows the exact time when the change occurred.
Workstation	Shows the name of the computer where the user was logged on when the change was made.
Details	Shows the before and after values of the modified object, object attributes, etc.

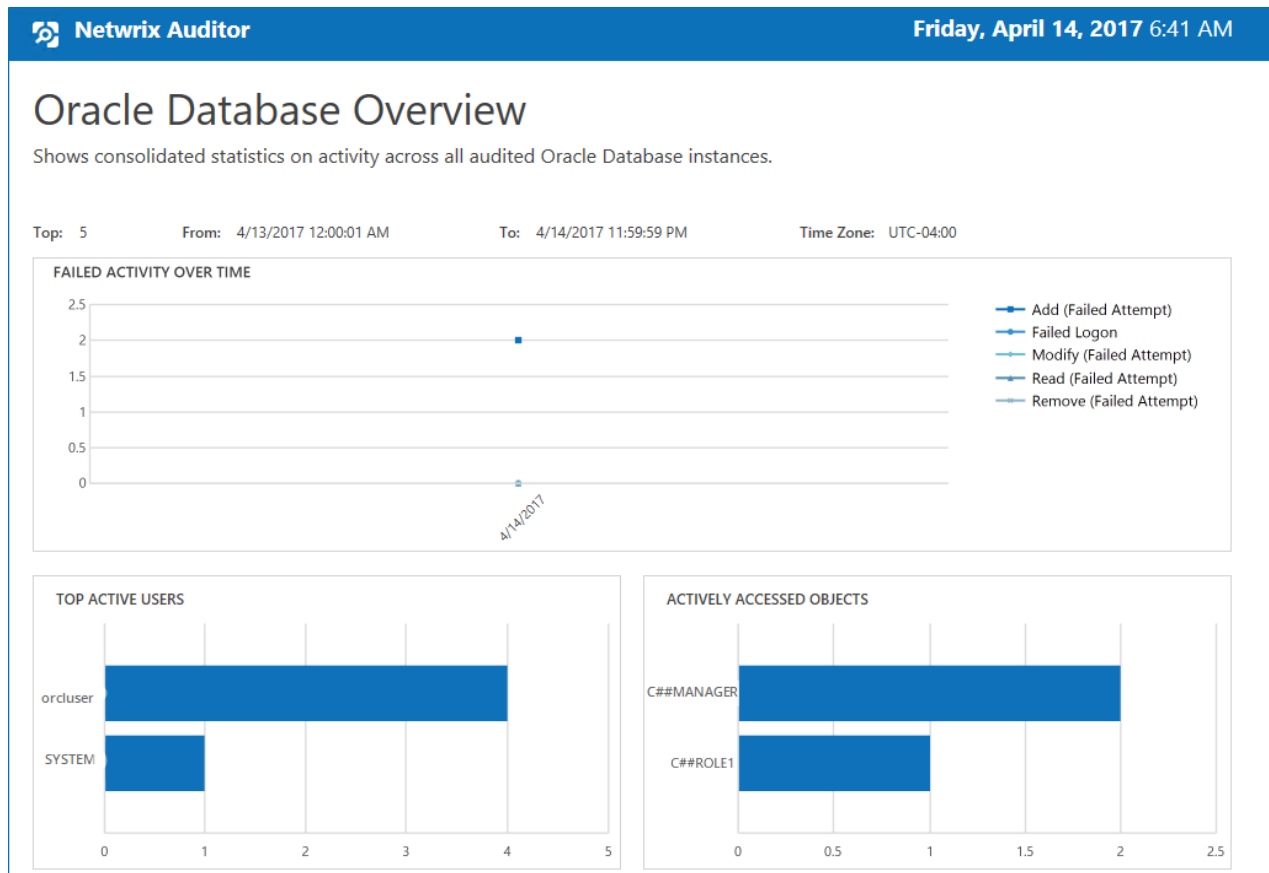

## 8.2. Review Overview Dashboard

**Overview** diagram provides a high-level overview of activity trends by date, user, server, object type or data source in your IT infrastructure. The **Overview** diagram aggregates data on all monitoring plans and all data sources, while system-specific diagrams provide quick access to important statistics within one data source.

After collecting initial data, making test changes to your environment and running data collection again, you can get at-a-glance statistics for changes with the **Oracle Database Overview**.

### *To see how your changes are reported with Oracle Database Overview*

1. On the main Netwrix Auditor page, navigate to the **Intelligence** section and click the **Reports** tile.
2. Expand the **Predefined** → **Oracle Database** reports.
3. Select the **Oracle Database Overview** report and click **View**.
4. Review your changes.
5. Click on any chart to jump to a table report with the corresponding grouping and filtering of data.

## 8.3. Review the All Changes Report

The Netwrix Auditor client provides a variety of predefined reports that aggregate data from the entire audited IT infrastructure or individual data sources.

Change and activity reports can be found under the **Reports** → **Predefined** → **your data source type** and provide a narrower insight into what is going on in the audited infrastructure and help you stay compliant with various standards and regulations (FISMA, HIPAA, PCI, SOX, etc.).

After collecting initial data, making test changes to your environment and running data collection again, you can take advantage of the reports functionality.

*To see how your changes are listed in the report*

1. On the main Netwrix Auditor page, navigate to **Reports** → **Predefined** → **your data source**.
2. Select the **All Oracle Database Activity by User** report.
3. Click **View** to open the report.

**Netwrix Auditor**

Friday, April 14, 2017 6:56 AM

## All Oracle Database Activity by User

Shows all changes made to Oracle Database, including changes to configuration and privileges, as well as successful and failed logon attempts, grouped by the user who made the change or logged on.

Filter	Value
Who:	orcluser

Action	Object Type	What	When
■ Added	Role	C##ROLE1	4/14/2017 10:48:34 AM
Where: stationwin10 Workstation: stationwin10 Action name: CREATE ROLE Container name: CDB\$ROOT Database user: SYS Privilege for action: SYSDBA Program name: SQL Developer Session ID: 2272038821 Unified policy name: ORA_SECURECONFIG			
■ Added	User	C##MANAGER	4/14/2017 10:49:31 AM
Where: stationwin10 Workstation: stationwin10 Action name: CREATE USER Container name: CDB\$ROOT Database user: SYS Privilege for action: SYSDBA Program name: SQL Developer Session ID: 2272038821 Unified policy name: ORA_SECURECONFIG			

## 8.4. Browse Data with Intelligence Search

Netwrix Auditor delivers complete visibility into your IT infrastructure. Its convenient interactive search interface enables you to investigate incidents and browse data collected across the entire IT infrastructure. When running a search, you are not limited to a certain data source, change type, or object name. You can create flexible searches that provide you with precise results on *who* changed *what*, and *when* and *where* each change was made.

After collecting initial data, making test changes to your environment and running data collection again, you can review changes in details with Intelligence search.

### To browse your audit data and see you test changes

1. On the main Netrix Auditor page, navigate to **Intelligence** → **Search**.
2. Add search filters to your search by clicking on a corresponding icon and providing a value. By default, all entries that contain this filter value are shown. For an exact match, use quotation marks.

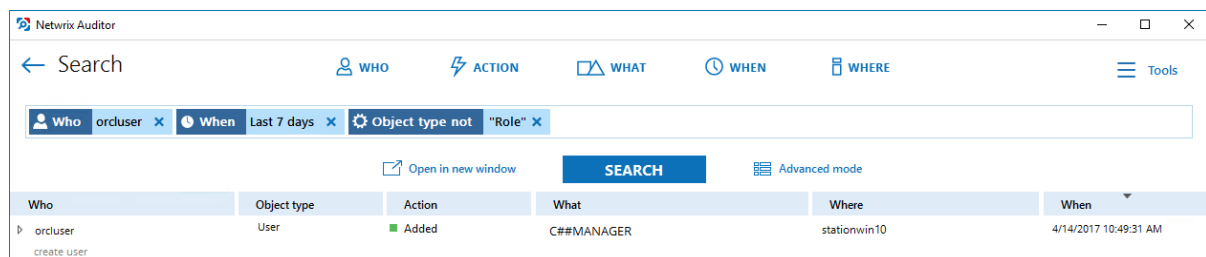

Filters are used to narrow your search results. To create a unique set of filters, you can:

- Add different filters to your search. Search results will be sorted by all selected filters since they work as a logical conjunction (e.g., **Who: Administrator** AND **Action: Added**).
- Specify several values in the same filter to search for any of them (e.g., **Action: Modified** OR **Action: Removed**). To do this, select a filter again and specify a new value.

**NOTE:** Refer to [Netrix Online Helpcenter](#) for detailed instructions on how to apply filters and change match types

3. Click **Search**.
4. Now, you can narrow your search and modify it right from the search results pane. Click any entry that contains excess data, select **Exclude from search** in the **Details** section and specify a filter, e.g., **Object type: Role** to leave information on new users only.

Your **Search** field will be updated, the **Object type not** filter will be added. Make sure to click **Search** again to update your search results.

5. Having reviewed your search results, navigate to **Tools**.
  - Click **Save as report** to save the selected set of filters. This search will be added to the **Custom** section inside **Reports**, so that you will be able to access it instantly. Refer to [Custom Search-Based Reports](#) for detailed instructions on how to create saved searches.
  - Click **Create alert** to get instant email or SMS notifications on suspicious activity that matches your current search criteria. You only need to specify a name for a new alert, add recipient and assign a risk score. The selected set of search criteria will be associated with the new alert automatically. Refer to [Alerts](#) for detailed instructions on how to create and configure alerts.

Try making more similar test changes to provoke an alert. For example:

Fri 4/14/2017 10:54 AM

**Administrator**

**Netwrix Auditor Alert: New Oracle Users**

To Administrator

**Netwrix Auditor Alert**

**New Oracle Users**

Who: orcluser  
 Action: Added  
 Object type: User  
 What: C##MANAGER  
 When: 4/14/2017 10:53:31 AM  
 Where: stationwin10  
 Workstation: stationwin10  
 Data source: Oracle Database  
 Monitoring plan: Oracle Database  
 Item: stationwin10:1521/oracle (Oracle Database instance)  
 RID: 20170411142947177F8832F3ADCEB49899B9BC1A1261FACBD

Once you have received the alert, click the **Behavior Anomalies** tile on the main Netwrix Auditor page to see how the product identifies potentially harmful users and displays their risk scores. Drill-down to user profile to review anomalies and mitigate risks. Refer to [Netwrix Online Helpcenter](#) for more information on behavior anomalies and risk scores.

## 9. Related Documentation

The table below lists all documents available to support Netwrix Auditor for Oracle Database:

Document	Description
<a href="#">Netwrix Auditor Online Help Center</a>	Gathers information about Netwrix Auditor from multiple sources and stores it in one place, so you can easily search and access any data you need for your business. Read on for details about the product configuration and administration, its security intelligence features, such as interactive search and alerts, and Integration API capabilities.
<a href="#">Netwrix Auditor Installation and Configuration Guide</a>	Provides detailed instructions on how to install Netwrix Auditor, and explains how to configure your environment for auditing.
<a href="#">Netwrix Auditor Administration Guide</a>	Provides step-by-step instructions on how to configure and use the product.
<a href="#">Netwrix Auditor Intelligence Guide</a>	Provides detailed instructions on how to enable complete visibility with Netwrix Auditor interactive search, report, and alert functionality.
<a href="#">Netwrix Auditor Integration API Guide</a>	Provides step-by-step instructions on how to leverage Netwrix Auditor audit data with on-premises and cloud auditing solutions using RESTful API.
<a href="#">Netwrix Auditor Release Notes</a>	Lists the known issues that customers may experience with Netwrix Auditor 9.9, and suggests workarounds for these issues.
