STEALTHBITS - THE FLEXIBLE SOLUTION

stealthbits
NOW PART OF **netwrix**

One of the world's most notable brands needed serious help with Active Directory cleanup. With more than 5,000 security groups with unknown owners, the organization needed to understand what these groups provided access to before they could take any steps to remediate them . This uncertainty was also causing issues with the effectiveness and efficiency of their Identity and Access Management (IAM) program. The primary user at the company had used solutions from a competitor previously, but decided to turn to Stealthbits not only to gather the data he could not with his existing solution, but to produce the views he needed through Stealthbits' flexible analysis and reporting facilities.

Challenges

The customer could not properly or efficiently grant or revoke access to corporate resources through their Identity & Access Management (IAM) platform, or institute governance workflows to control resource access, because they could not determine:

- Where their groups were being used across their entire environment (not just unstructured data repositories)
- Who the owners of the groups were for over 5000 groups

Solution

Stealthbits was able to meet the organization's needs and very specific reporting requirements by:

- Mapping groups and where they were being leveraged through both scanning of known resources (e.g. File Shares, SharePoint sites, etc.) and monitoring requests for group membership information from unknown resources through LDAP calls to Active Directory
- Calculating "Probable Owners" for each security group and assigning ownership through automatic population of AD object attribute fields

With a mapping of each resource and group and a business resource to verify each group's membership, the customer achieved complete control over resource access and maximized their investment in IAM through Stealthbits' flexible solution.

> With a mapping of each resource and group, the customer achieved complete control over resource access and maximized their investment in IAM through Stealthbits' flexible solution.
