STEALTHBITS - THE INTEGRATED SOLUTION

stealthbits
NOW PART OF **netwrix**

An 8,200 employee investment management firm needed to address some critical gaps in visibility across their network file share infrastructure, including the identification of resource and data owners, effective and excessive access rights, and the location of sensitive data. As an organization with a mature mix of technology platforms, they were also seeking a solution that could integrate this desired dataset with their existing IAM, ITSM, and DLP technologies, allowing them to further streamline security, compliance, and operational processes across their many locations worldwide.

Challenges

The customer needed to:

- Identify and remediate open access to file share resources
- Identify resource and data owners without agent deployments
- Integrate ownership data with IAM and DLP processes
- Map Active Directory security group usage across file share infrastructure for tracking and clean up purposes

Solution

Stealthbits was able to solve the customer's challenges by:

- Agent lessly collecting all relevant data points (permissions, effective access, ownership, and sensitive data) across the customer's entire File Share estate, spanning the US, UK, and EMEA
- Producing data views that were automatically consumable by Sail-Point (IAM), Symantec (DLP), and ServiceNow (ITSM)
- Automatically stamping Active Directory security groups with the file share locations they were provisioned to

Stealthbits' ability to integrateallowed this customer to maintain consistency for their end users and technology professionals, maximize the value of their existing investments, and control access to the vast majority of their organization's data resources through a single system.

> **Stealthbits' ability to integrate allowed this customer to maintain consistency, maximize value, and control access to their data resources through a single system.**
