STEALTHBITS - THE SCALABLE SOLUTION

stealthbits
NOW PART OF netwrix

Managing an IT infrastructure accessible to 120,000 users is no simple task. For this global manufacturing company, it was even harder to determine what each of these 120,000 users had access to. More specifically, this customer needed to map where each and every Active Directory security group had been provisioned across a globally distributed network, including File Shares, SharePoint Sites, custom applications, and more. In order to facilitate an otherwise flawed group membership review process, Stealthbits was asked to connect the dots across many hundreds of systems and data repositories at dozens of locations worldwide.

Challenges

The customer needed to:

- Understand where Active Directory groups were in use
- Determine effective access to data resources through nested group-expansion and other avenues of access to their data
- Integrate with their home grown entitlement review system to allow-group owners to verify their respective group memberships

Solution

Stealthbits was able to help the customer:

- Scan a heterogeneous mix of data repositories including File Shares on Windows, NAS, Unix and Linux systems, SharePoint sites, and more
- Map where AD security groups were being used to provide access to each data repository across 55 data centers globally, including the United States, South America, China, EMEA, and India
- Identify sensitive data and monitor all file access activities for security, forensics, and compliance purposes

Stealthbits' ability to not only address these difficult requirements, but do so at scale, allowed the customer to provide their data owners with the context they needed to make proper access decisions on behalf of their organization, as well as achieve a heightened state of security through the reduction of risk and increased operational efficiency.

COMPANY PROFILE

Vertical:
Manufacturing

Size:
120,000 users, 55 data centers
