

STEALTHAUDIT[®] FOR WINDOWS

Comprehensive Windows desktop and server auditing for security and compliance

stealthbits
NOW PART OF **netwrix**

Data breach begins at the system layer, which is why proactive assessment and remediation of the privileged access rights and critical security misconfigurations attackers exploit is among the most pragmatic ways to mitigate the risk of credential theft, lateral movement, and privilege escalation.

With StealthAUDIT for Windows, organizations can quickly inventory, assess, and secure their Windows desktop and server infrastructure from a central location, without deploying a single agent.

StealthAUDIT FOR WINDOWS DELIVERS

- **Privileged Account Discovery & Governance** – Audit who has privileged access to each system, identify system owners, and govern system-level access rights through entitlement reviews.
- **Windows Vulnerability Assessment** – Identify dozens of conditions and misconfigurations leveraged by attackers to compromise Windows systems, Active Directory, and ultimately your data.
- **Baseline Configuration Analysis** – Baseline desired configuration to identify violations of Best Practices and enforce security and operational policies.
- **Patch Compliance** – Quickly and efficiently assess system patch levels to determine where gaps and vulnerabilities exist, allowing for prioritization of efforts and expedited remediation.
- **Windows Asset Inventory** – Inventory hardware and software to identify unauthorized programs and peripherals, software license utilization and compliance, rogue systems, and more.
- **Preconfigured Reporting** – Hit the ground running with preconfigured reports focused on Users and Roles, Sensitive Data, Permissions, Configuration, and Activity.
- **Workflow Composition** – Leverage the full power of StealthAUDIT to automate processes in their entirety, including integration with 3rd party solutions and more.
