Sb | BUSINESS INTELLIGENCE REPORT PACKS

Extensible visibility into your data with Tableau & Power BI

In today's data-centric world, organizations of all sizes can easily struggle with 'information overload'. A general lack of understanding and control of an organization's data can quickly become a serious problem, and decision-making processes without data to back them up can become subjective and misguided. Business owners, managers, and administrators alike seek ways to make data within their organization understandable and accessible.

INTELLIGENT VIEWS COME FROM HIGH QUALITY DATA

Business Intelligence (BI) tools compile a company's most essential data so employees can focus on answering critical business questions. The ability to visualize and understand data quickly and efficiently can improve decision making, optimize business processes, and increase overall operational efficiency within an organization.

In terms of data security, for example, BI tools can be an effective means by which to help data owners make important decisions. With high quality data, like the location, ownership, and access to sensitive information, data owners can quickly determine the risk their data poses to the organization specifically, and help remediate high-risk conditions proactively.

A FLEXIBLE SOLUTION AND ARCHITECTURE

STEALTHbits' App Catalog contains a collection of Business Intelligence tool "Report Packs" for use with STEALTHbits' StealthAUDIT® Management Platform. Once validated by STEALTHbits, "Report Packs" are posted online and shared with the entire STEALTHbits community, free for licensed StealthAUDIT users. The Report Packs come complete with predefined data models that allow Tableau and Power BI users to create their own custom reports and dashboards, as well as leverage preconfigured reports that take immediate advantage of Active Directory and File System data collected by StealthAUDIT.

KEY FEATURES & BENEFITS

Predefined Data Models

The Report Packs come complete with predefined data models based on data collected by StealthAUDIT.

Preconfigured Reports

Report Pack users can leverage preconfigured reports that take immediate advantage of Active Directory and File System data.

Completely Customizable

Predefined data models allow Tableau and Power BI users to easily create their own custom reports and dashboards.

Online Community

While STEALTHbits builds and publishes Report Packs of their own, users can also build and share their own connectors with the community at large.
