

IAM & StealthAUDIT® INTEGRATION

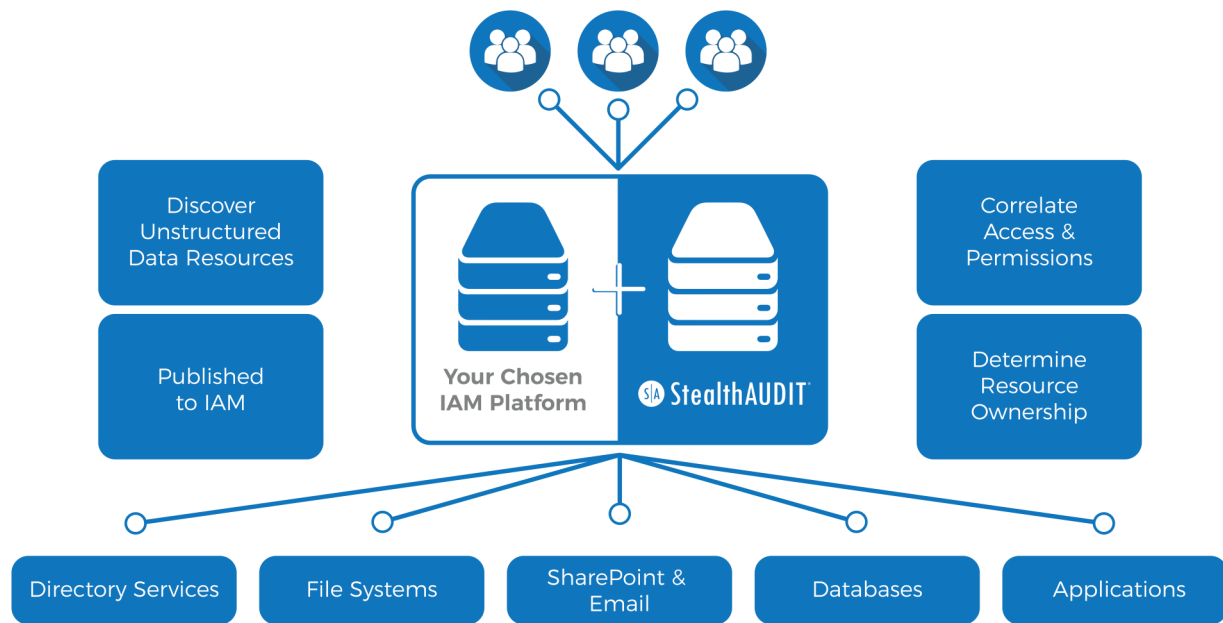

INTEGRATION THROUGH INTERROGATION

Without the StealthAUDIT Management Platform’s (SMP) ability to interrogate unstructured data repositories at the deepest levels, current IAM solutions cannot manage, attest, or provision access to File Systems and SharePoint. Through SMP, IT organizations can finally move to an event-driven access review and automated self-service access model for Active Directory and unstructured data, using the same workflows users leverage today.

STEALTHbits provides organizations leveraging IAM with vital information to provide true integration of unstructured data sources:

	With StealthAUDIT	Without StealthAUDIT
Effective Attestation for Unstructured Data	User-based Access Views Resource-based Access Views	Assumed Access
Prioritization of Attestation Efforts	Role Changes within AD File System Permission Changes	Information Overload
Unstructured Data Entitlements	Share/Group/Resource/Owner Request, Provision, Review, Revoke	Blind to Unstructured Data
Entitlement Transformation	Structured Entitlements	Chaos
Activity Modeling	Compare User Activity + Granted Access	No Visibility

StealthAUDIT eliminates a significant blind spot in IAM platforms by interrogating Active Directory and the unstructured data repositories it controls access to. This extends IAM's visibility into some of the most critical data resources across the organization.
