STEALTHbits

Complete Discovery, Classification, and Governance
Discover, classify, and secure your most critical assets with STEALTHbits & Boldon James

Sb | **Boldon James**
A QinetiQ company

STEALTHbits provides a robust, scalable platform for auditing vast amounts of data and automating the application of a consistent security model across unstructured data resources. Integrating Boldon James Classifier with STEALTHbits' solutions enables organizations to automatically identify and tag legacy documents, making users fully aware of data sensitivity and ensuring appropriate security policies are enforced on classified content such that only the right people have access to the right information.

The integrated solution simplifies the data classification task by exploiting the consistency of automation to ensure that sensitive legacy information is correctly identified before being handled by data users.

SOLUTION OVERVIEW

The integrated solution is divided into two separate but equally important components; discovery of legacy content and enforcement of data security policy.

IDENTIFY SENSITIVE CONTENT AND APPLY TAGS

In order to overcome the challenge of classifying legacy content that already exists and to utilize the classification applied to new content by users of Boldon James Classifier,

STEALTHbits scans the contents of hundreds of document types across unstructured data repositories like network file shares. This also includes image files using advanced Optical Character Recognition (OCR) technology. Out-of-the-box rules for government and industry compliance standards can be combined with criteria specific to an organization's internal policy to further streamline the process.

With a full understanding of which files are sensitive, who has access to those files, and how those files are being used, STEALTHbits facilitates the automatic application of Boldon James classification tags to the appropriate documents.

ENFORCE POLICY

Boldon James Classifier engages users in the data classification process, creating awareness and enforcing data handling policy based upon classification. Classifier applies both visual markings to content and metadata tags to data at the point of creation or manipulation, capturing the users' insight into the meaning or value of information.

In conjunction with the classification process, STEALTHbits' solutions leverage the classification tags applied by Boldon James to report on and remediate permissions to exposed sensitive files. Access to these files is monitored to maintain an audit trail and alert in real-time when these files are abused or mishandled.

BENEFITS

- **Reduce Security Risk:** With complete visibility across legacy and new content, organizations can efficiently and effectively prioritize risk and protect their most sensitive data from theft.

- **Achieve Compliance:** The integrated STEALTHbits and Boldon James solution streamlines the generation of critical compliance artifacts, enabling organizations to demonstrate a cohesive and comprehensive compliance strategy to internal and external auditors.

- **Accelerate Cloud Initiatives:** A primary hindrance to cloud adoption has been the uncertainty of what data is being migrated. The 360° visibility this integration provides will give an organization complete confidence in their cloud migration initiatives.

- **Enhance Program Effectiveness:** With all files being classified, the context now available to other technologies can drastically increase the effectiveness of critical programs like Data Loss Prevention (DLP) and User & Entity Behavior Analytics (UEBA).
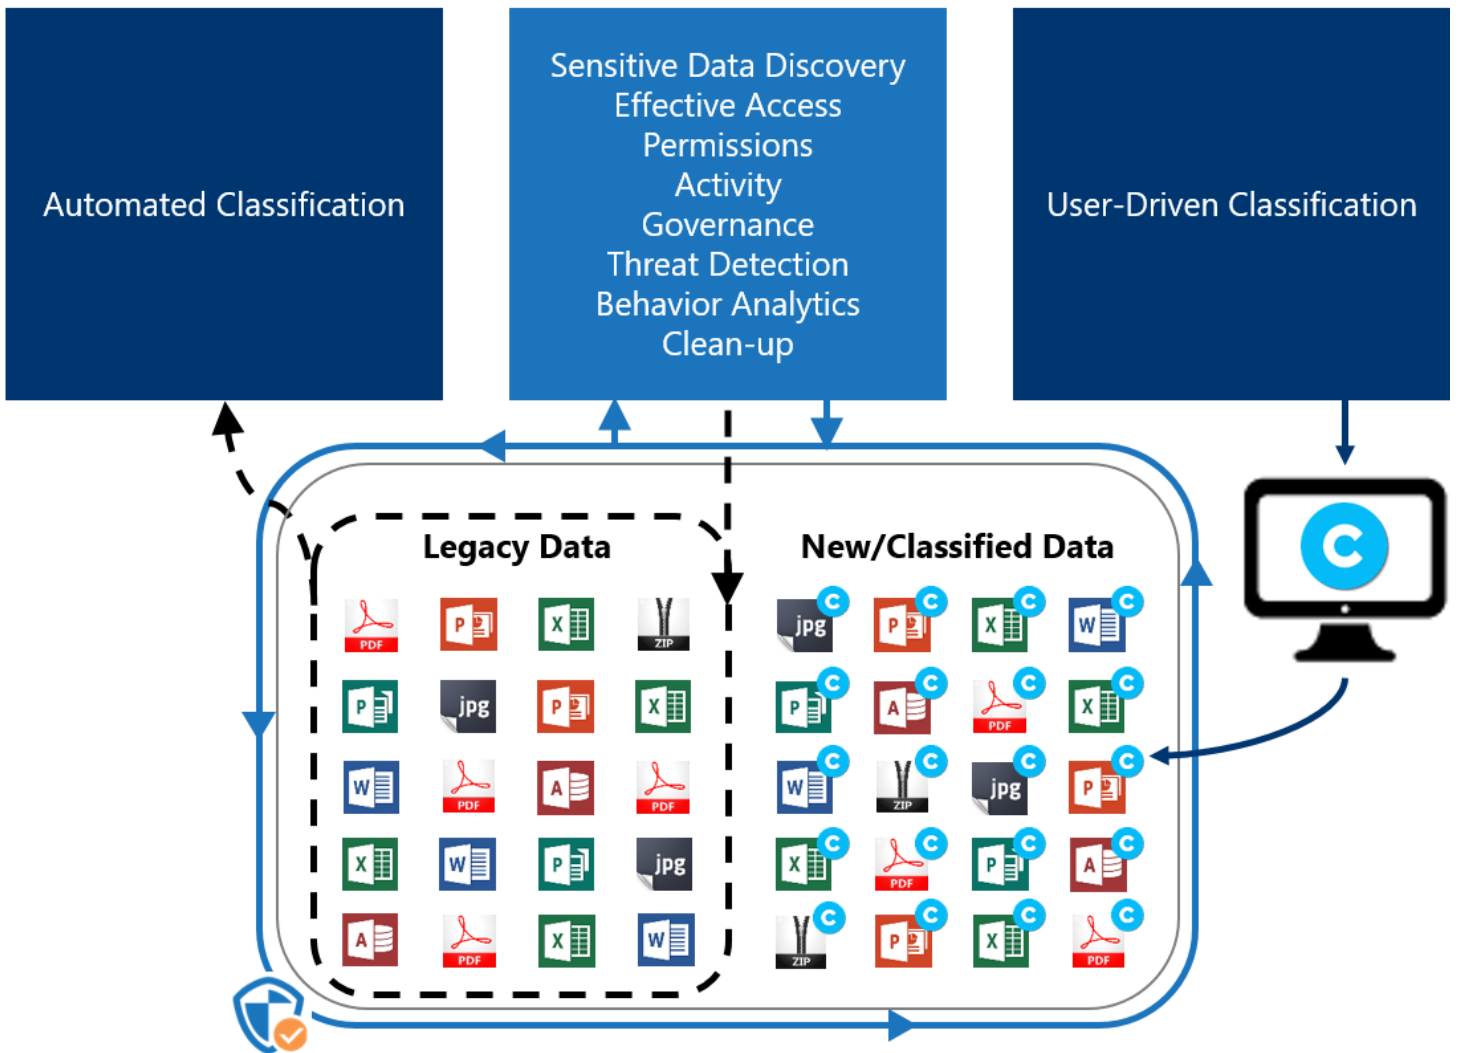

HOW IT WORKS

ABOUT BOLDON JAMES

Boldon James is an industry specialist in data classification and secure messaging, delivering globally-recognized innovation, service excellence and technology solutions that work.

Part of the QinetiQ group, a major UK plc and FTSE 250 company, we integrate with powerful data security and governance ecosystems to enable customers to effectively manage data, streamline operations and proactively respond to regulatory change.

We're a safe pair of hands, with a 30 year heritage of delivering for the world's leading commercial organizations, systems integrators, defense forces and governments.

ABOUT STEALTHbits TECHNOLOGIES

STEALTHbits Technologies is a cybersecurity software company focused on protecting an organization's credentials and data. By removing inappropriate data access, enforcing security policy, and detecting advanced threats, we reduce security risk, fulfill compliance requirements, and decrease operations expense.

Identify threats. Secure data. Reduce risk.
