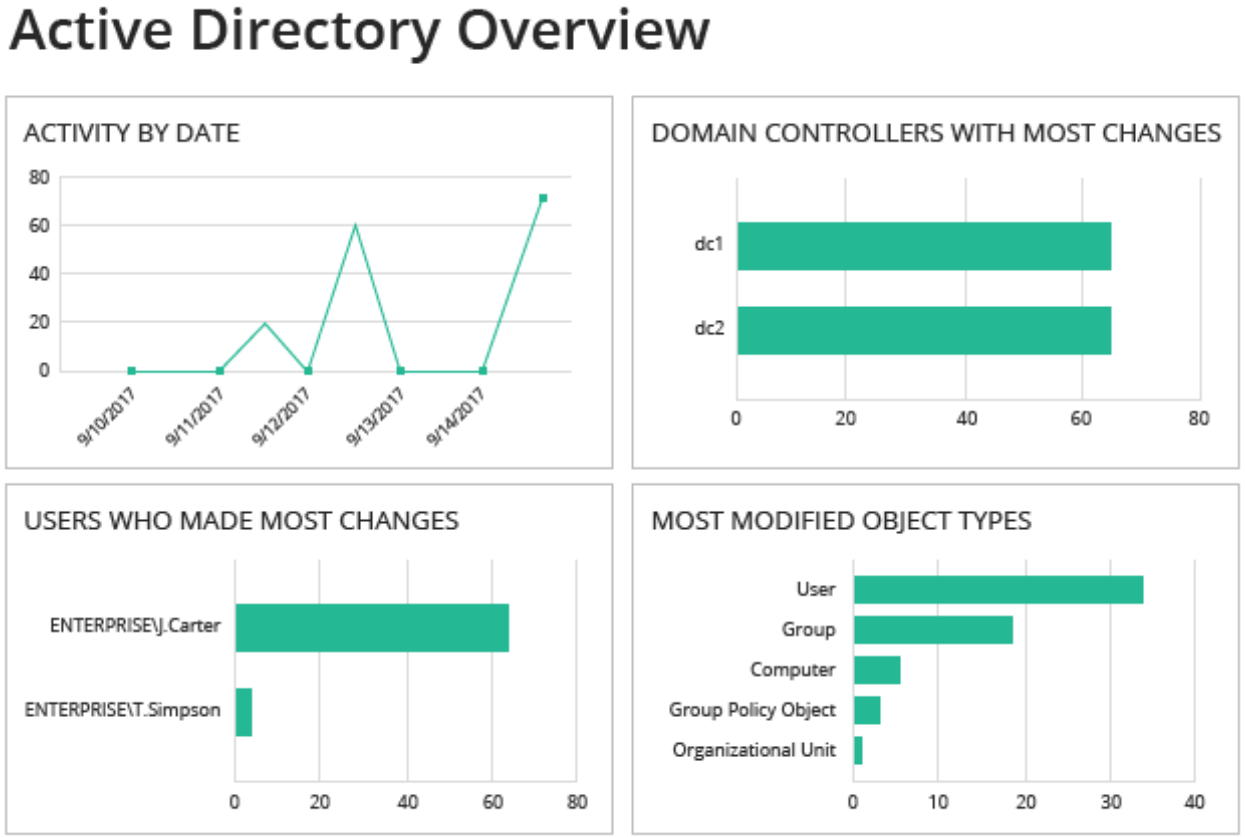
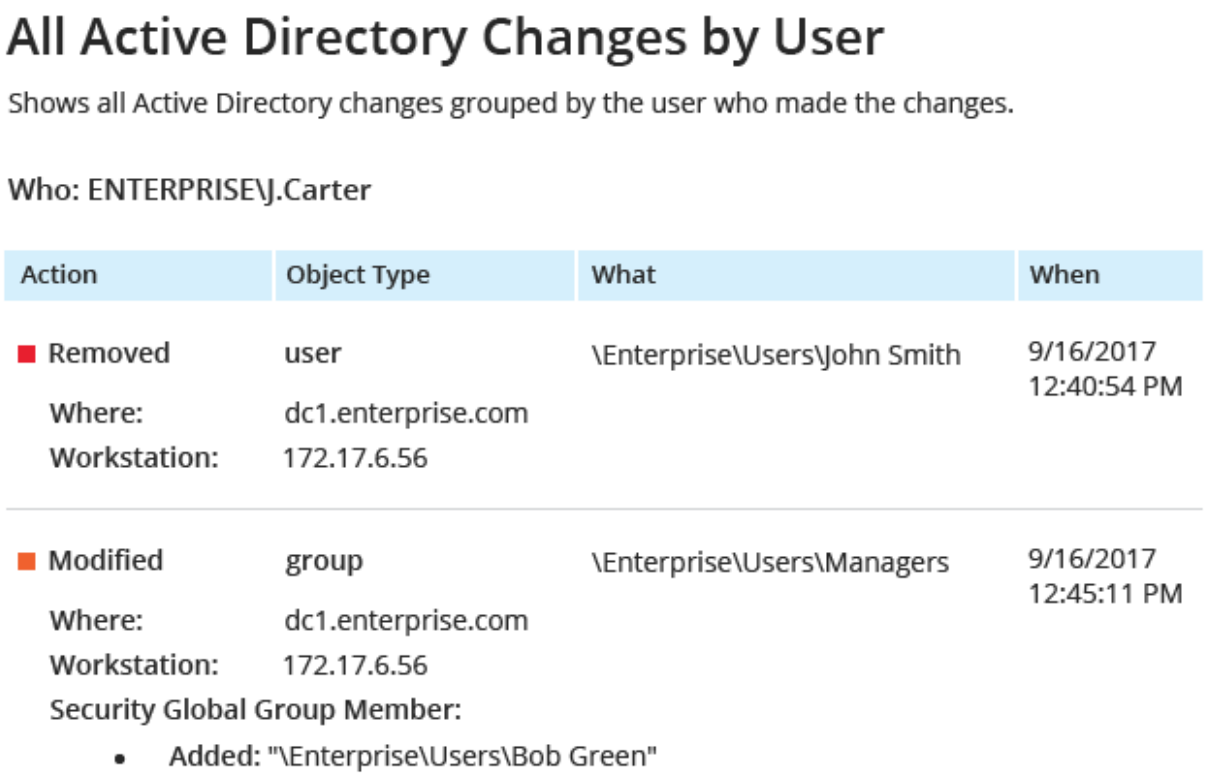
# Enable continuous Active Directory auditing and prove that AD configurations are under control

Quickly find answers to questions from internal and external auditors, such as what has changed in the Enterprise Admins group during the past year and who made each change.



# Prepare audit reports and troubleshoot unwanted Active Directory changes faster

Netwrix Active Directory auditing software overcomes the limitations of native auditing tools by eliminating time-consuming and error-prone manual processes for data consolidation, analysis and reporting



## All Active Directory Changes by User

Shows all Active Directory changes grouped by the user who made the changes.

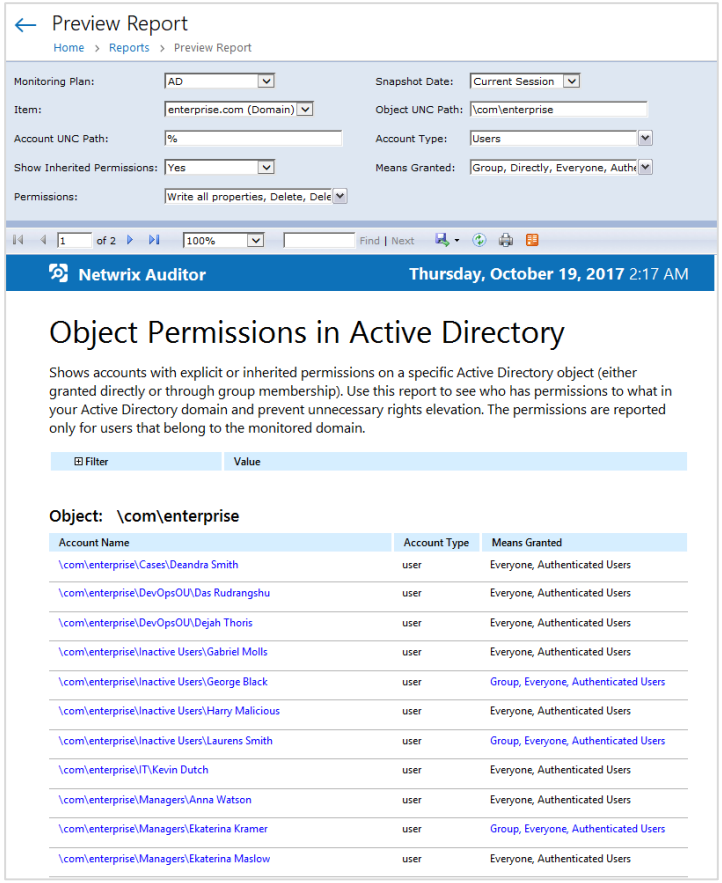
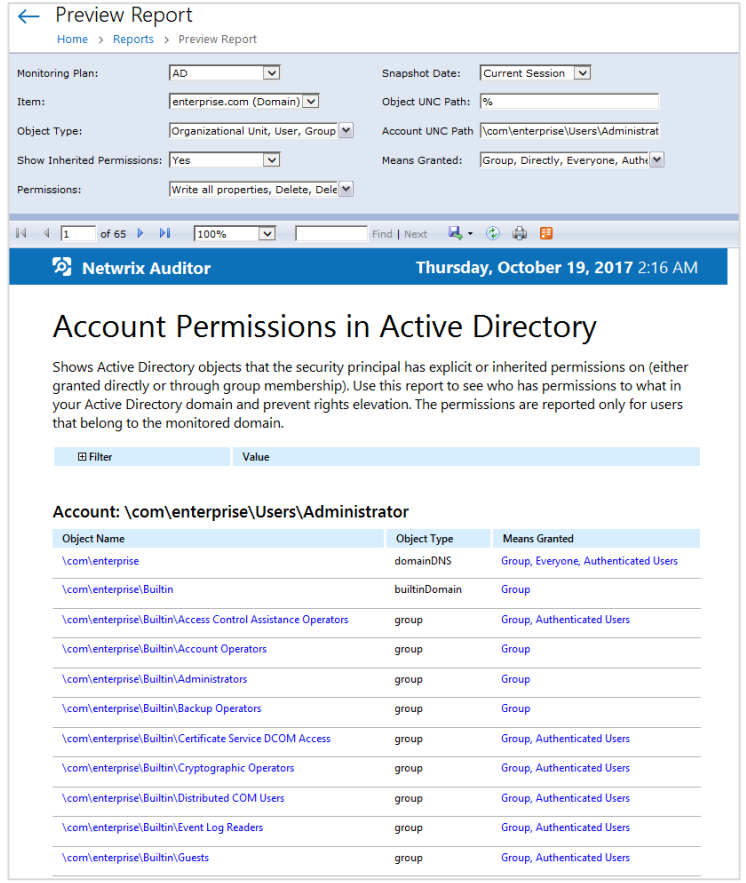
# Permission Analysis in AD

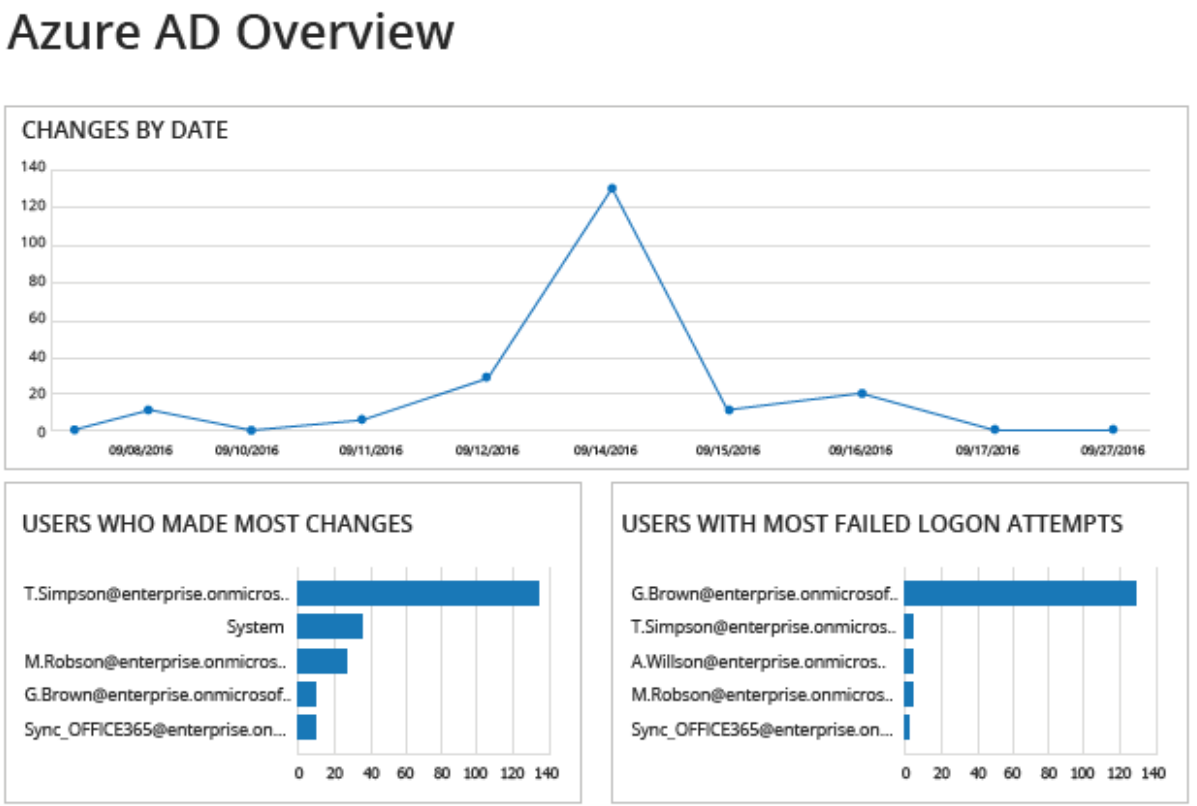
Reports on Active Directory and Group Policy configurations help you make sure that group membership, effective permissions, password policies and other critical controls are in line with a known good baseline, so you can mitigate cyber risks and enforce good IT hygiene.





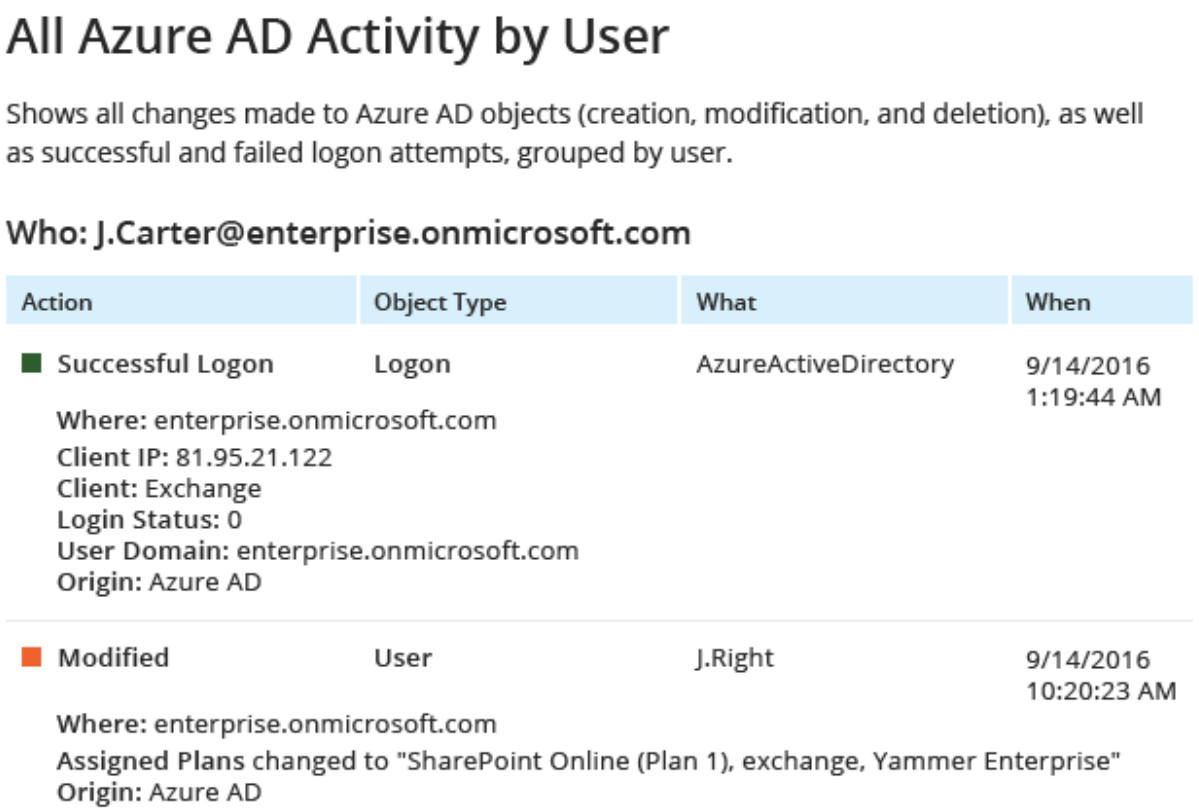
# Mitigate information security threats when hosting Active Directory in Azure

Easily track successful and failed sign-in attempts and critical changes to Azure AD users, groups, roles, contacts, applications, devices, licenses and more



# Gain visibility into user and administrator activity in Azure AD and ensure your audit trail is safely retained for years

Establish full accountability of your privileged Azure AD users with the actionable intelligence the reports provide



## All Azure AD Activity by User

Shows all changes made to Azure AD objects (creation, modification, and deletion), as well as successful and failed logon attempts, grouped by user.
